Type MS · Visual illusions and visual constancies

Answer 1 of 7 · Question 22 part whole · 2 marks

2025 JUN · Paper 02 · find part whole in this mark scheme extract

Question Number	Answer	Mark
22	Up to **two** marks for understanding of how visual constancies keep perception of colour the same. For example: • Visual constancy is the ability of our visual system to perceive colour as constant even when the retinal image changes (1). In artificial light a colour may seem darker than in sunlight, but the brain discounts the level of illumination and retains the images' true colour (1). • Visual constancy is the ability of our visual system to perceive a colour as constant even when the environment changes (1). For example, the brain uses past experiences and expectations to perceive an apple as red no matter whether it is seen in poor or bright light (1). Accept any other appropriate response.	**(2)**

Type MS · Visual illusions and visual constancies

Answer 2 of 7 · Question 26 part whole · 2 marks

2019 JUN · Paper 02 · find part whole in this mark scheme extract

Question number	Answer	Mark
26	**One** mark for demonstrating accurate understanding of visual constancy. **One** mark for exemplification using the scenario. For example: • Shape is a visual constancy where an individual will know an object stays the same even if the visual input is different (1) so Norman would be able to perceive that the position of door does not mean the shape of the door has changed, so he is able to give the correct shape as a rectangle (1). Accept any other appropriate response.	**(2)**

Type MS · Visual illusions and visual constancies

Answer 3 of 7 · Question 22 part whole · 2 marks

2020 NOV · Paper 02 · extract 1 of 2 · find part whole in this mark scheme extract

Question number	Answer	Mark
22	Up to **two** marks for understanding of ambiguous figures. For example: • The image in Figure 2 is an ambiguous figure because the cube can be perceived in more than one way (1) and a viewer is usually able to experience reversal to see both image forms (1). Accept any other appropriate response.	**(2)**

Type MS · Visual illusions and visual constancies

Answer 3 of 7 · Question 22 part whole · 2 marks

2020 NOV · Paper 02 · extract 2 of 2 · find part whole in this mark scheme extract

Type MS · Visual illusions and visual constancies

Answer 4 of 7 · Question 24 part whole · 2 marks

2021 NOV · Paper 02 · find part whole in this mark scheme extract

Question number	Answer	Mark
24	Up to **two** marks for understanding of colour constancy. For example: • Colour constancy aids humans in the recognition of objects regardless of what light source is present (1) as they perceive that a colour remains the same even if the object is seen in the light or dark (1). Accept any other appropriate response.	**(2)**

Type MS · Visual illusions and visual constancies

Answer 5 of 7 · Question 21 part whole · 1 mark

2023 JUN · Paper 02 · find part whole in this mark scheme extract

Question number	Answer	Mark
21	**One** mark for knowledge of visual constancy. • When a person perceives an object as remaining the same despite variations in visual input to colour, size, or shape (1). Accept any other appropriate response.	**(1)**

Type MS · Visual illusions and visual constancies

Answer 6 of 7 · Question 22 part whole · 1 mark

2024 JUN · Paper 02 · find part whole in this mark scheme extract

Question number	Answer	Mark
22	**One** mark for knowledge of a visual illusion. • This is the perceptual experience of a physical object that deceives a viewer into seeing something misleading (1). Accept any other appropriate response.	**(1)**

Type MS · Visual illusions and visual constancies

Answer 7 of 7 · Question 20 part whole · 1 mark

2025 JUN · Paper 02 · find part whole in this mark scheme extract

Question Number	Answer	Mark
20	**The only correct answer is B** – *Distortion* A is not correct as the image is not an ambiguous figure. C is not correct as this is a binocular cue and not an illusion. D is not correct as the image is not a fiction.	**(1)**
