Type MS · Haber and Levin (2001): judging size and distance

Answer 1 of 5 · Question 25 part whole · 2 marks

2024 JUN · Paper 02 · find part whole in this mark scheme extract

Question number	Answer	Mark
25	**One** mark for identification of a reason. **One** mark for reasoning/justification through a concept. For example: • The size of a window has token variance because house windows can come in a variety of sizes, so Colin underestimated the size of curtains he needed (1). Haber and Levin (2001) found that token variance reduced the accuracy of peoples' size estimation as these objects have a greater divergence in size within the category, such as windows (1). Accept any other appropriate response.	**(2)**

Answer 2 of 5 · Question 28 part whole · 9 marks

2019 JUN · Paper 02 · extract 1 of 3 · find part whole in this mark scheme extract

Question number	Indicative content	Mark
28	AO1 = 3 marks; AO2 = 3 marks; AO3 = 3 marks Markers must apply the descriptors in line with the general marking guidance (on pages 2–3). Due to the intrinsic links between the skills, if a response evidences performance against only one trait/skill it will be for demonstrating knowledge and understanding. An answer displaying qualities of AO1 only, cannot be awarded more than the top of Level 1, no matter how strong the performance is in AO1. AO1 • Haber and Levin (2001) found that distance estimates reduced when an object was not known. • They concluded that memory and prior knowledge have a role in size estimating rather than just perception. • Participants in Haber and Levin (2001) could estimate the size of unknown objects quite accurately. AO2 • Zara could judge the distance of most of the familiar objects because she may have known the relative size of objects she sees on a regular basis. • The inaccuracies that Zara made could be because objects, for example the coffee machine, may not have actually been familiar to her. • Zara could not always estimate the size of the objects with accuracy, only being able to judge 15 of the 30 she saw. AO3 • The inaccuracies of distance estimates Zara made are consistent with the findings from Haber and Levin (2001) so knowing the object's size can aid distance judgements. • Size perception relied on Zara's accurate identification of the object suggesting the findings of Haber and Levin (2001) can explain her inaccurate judgement if objects are unfamiliar. • Inaccuracy in size showed that Haber and Levin (2001) cannot fully explain the size judgements made by Zara, she may have been using visual constancies to determine her judgement.	**(9)**

Type MS · Haber and Levin (2001): judging size and distance

Answer 2 of 5 · Question 28 part whole · 9 marks

2019 JUN · Paper 02 · extract 2 of 3 · find part whole in this mark scheme extract

Level	Mark	Descriptor
	0	No rewardable material.
Level 1	1–3	• Demonstrates isolated elements of knowledge and understanding of a limited range of psychological ideas (AO1). • Provides little or no reference to relevant psychological ideas related to the context (AO2). • Limited attempt to deconstruct relevant psychological ideas. Limited consideration of supporting/refuting evidence, leading to generic judgements (AO3).
Level 2	4–6	• Demonstrates mostly accurate understanding of some relevant psychological ideas (AO1). • Provides some reference to relevant psychological ideas related to the context but this may be limited or lack relevance at times (AO2). • Deconstructs relevant psychological ideas using mostly logical chains of reasoning. Some consideration of supporting/refuting evidence, leading to a judgement (AO3).
Level 3	7–9	• Demonstrates accurate and thorough knowledge and understanding of relevant psychological ideas (AO1). • Provides sustained reference to relevant psychological ideas related to the context (AO2). • Deconstructs relevant psychological ideas using logical chains of reasoning. Sustained consideration of supporting/refuting evidence, showing an awareness of competing arguments, leading to a judgement (AO3).

Answer 3 of 5 · Question 20 part whole · 1 mark

2020 NOV · Paper 02 · find part whole in this mark scheme extract

Question number	Answer	Mark
20	B – 109 male undergraduate students **The only correct answer is B** A is incorrect because there were not 99 male students C is incorrect because there were not 119 male students D is incorrect because there were not 129 male students	**(1)**

Type MS · Haber and Levin (2001): judging size and distance

Answer 4 of 5 · Question 20 part whole · 1 mark

2022 JUN · Paper 02 · find part whole in this mark scheme extract

Question number	Answer	Mark
20	C - 3 **The only correct answer is C** A is incorrect as three quadrants contained objects B is incorrect as three quadrants contained objects D is incorrect as three quadrants contained objects	**(1)**

Type MS · Haber and Levin (2001): judging size and distance

Answer 5 of 5 · Question 25 part whole · 4 marks

2023 JUN · Paper 02 · extract 1 of 2 · find part whole in this mark scheme extract

Question number	Answer	Mark
25	**One** mark for identification of strength/weakness (maximum **two** marks). **One** mark for justification, which must be linked to the strength/weakness identified (maximum **two** marks). For example: Strength • The hotel building could be considered a token variant object explaining why Killian was judging the size inaccurately as there are a large range of sizes for hotel buildings (1) which Haber and Levin (2001) found in their research, where more inaccuracy of size estimates was found for objects that had a larger variance in size, which supports why Killian was inaccurate in his estimation (1). Weakness • Killian was able to use his prior understanding of token invariant object size from the cars he could see outside the hotel building to make his judgement which was not researched by Haber and Levin (2001) (1) as they did not test size estimations of token variant objects where there was a cue or indicator present from a token invariant object in the same quadrant, so it may not explain Killian's size estimation (1). Accept any other appropriate response.	**(4)**
