Practice workbook · Experiments: lab, field and natural

Features, strengths and weaknesses of the three experimental methods.

4 question parts: 1 worked-example retry and 3 further practice parts.
Name: _____ Class: _____ Date: _____

Practise one question type at a time. Attempt the part inside the red boundary; the rest of the question and any figures are kept for context. Write your working in the answer space.

The first question is a retry of the website worked example, without its solution. Check your answers online with 'Check my answer', or ask your teacher for the answer booklet.

2023 JUN · Paper 02

Worked-example retry · Attempt part whole only.

***5** Godden and Baddeley (1975) conducted a field experiment to test memory. They used lists of words that were learned and then recalled in either the same or different environments to learning.

They used scuba divers as participants who learned and recalled the words either underwater or on dry land. These environments were familiar to the divers.

The scuba divers were allocated into the following different conditions:

- Words learned underwater, recalled underwater.
- Words learned underwater, recalled on dry land.
- Words learned on dry land, recalled on dry land.
- Words learned on dry land, recalled underwater.

The word lists were prerecorded and presented to the scuba divers twice when they were in their learning environment. The words were read at two-second intervals in the recording.

Godden and Baddeley (1975) found that more words were recalled when the divers were in the same environment in which they had learned the words, compared to when learning and recall took place in different environments.

Evaluate the use of field experiments to investigate human behaviour.

3 Becca wants to find out if there are sex differences in male and female brain functioning. She decides to use a laboratory experiment.

(a) State **one** feature of a 'laboratory experiment'.

(1)

(b) Describe how Becca could use volunteer sampling to gather the participants for her laboratory experiment.

(2)

OLevels.COM SCHOOL

(c) Becca will give each participant a coordination task and a word-meaning task to test for sex differences in brain functioning. She decides to use a single-blind technique.

Describe **one** reason why Becca used a single-blind technique for her experiment.

(2)

(d) Becca conducted her laboratory experiment with 30 male and 25 female participants.

Calculate the ratio of male to female participants in Becca's sample.

(1)

Ratio .....

1 James is investigating the impact of brain damage on memory. He asks a brain-damaged patient to come to the university where he has set up a room to conduct a test of word recall.

(a) Identify the research method James is using in his investigation.

(1)

- ☒ **A** Questionnaire
- ☒ **B** Laboratory experiment
- ☒ **C** Natural experiment
- ☒ **D** Interview

(b) Describe how James can maintain the confidentiality of the patient when he publishes his investigation.

4. Question 5 · part whole · 12 marks

2022 JUN · Paper 02

Further practice · Attempt part whole only.

***5** Becker et al. (2002) conducted a natural experiment in Fiji to investigate the impact of television on eating behaviours. They assessed attitudes to eating in 1995, just as television was being introduced to the native population. They returned in 1998 to assess eating behaviours after three years of television exposure.

63 girls with a mean age of 17.3 years took part in 1995. A second sample of 65 girls with a mean age of 16.9 years took part in 1998.

To score eating behaviours, the two samples of girls completed a standardised EAT-26 questionnaire. They also answered questions about television viewing. Their weight, height, and body mass index (BMI) were also recorded.

Comparisons between 1995 and 1998 data indicated that, after exposure to western imagery on television, the reports of disordered eating such as self-induced vomiting to lose weight had increased.

Evaluate the use of natural experiments to investigate human behaviour.
