Answer 1 of 6 · Question 6 part whole · 12 marks

2024 JUN · Paper 02 · extract 1 of 3 · find part whole in this mark scheme extract

Question number	Indicative content	Mark
6	AO1 = 4 marks; AO2 = 4 marks; AO3 = 4 marks Markers must apply the descriptors in line with the general marking guidance (on pages 2–3). Due to the intrinsic links between the skills, if a response evidences performance against only one trait/skill it will be for demonstrating knowledge and understanding. An answer displaying qualities of AO1 only, cannot be awarded more than the top of Level 1, no matter how strong the performance is in AO1. AO1 • A participant observation is when the observer takes part in the phenomena or context that they are observing. • Detailed, qualitative information can be recorded in observations about the naturally occurring events that take place in the environment. • Covert observations require the researcher to undertake their research without permission from those who are being observed. • Non-participant overt observations are when the researcher is not part of the group being researched and may also share the aim of their research with the participants to gain permission. AO2 • The observers behaved like patients on the ward, being part of the activities so as not to raise suspicion of their presence in the hospital. • The diaries about patient behaviour and staff responses will provide in-depth information about the experiences of patients in a psychiatric ward of a hospital. • Rosenhan (1974) did not gain informed consent from all the hospitals, staff, or patients on the wards to include their data in the observation records made by the fake patients. • Knowing they were being observed and also perhaps the aims of the observation, the hospital staff could have changed their behaviour and treated the patients better and spent more time with them. AO3 • Immersion into the situation being observed can reduce the impact of demand characteristics on the data gathered as the staff will behave in their usual, normal manner. • Qualitative data provides rich detail about behaviours which increases the validity of findings about mental health wards so the findings can relate to genuine experiences. • Without knowing the research was taking place, none of the staff or patients on the wards could exercise a right to withdraw from being observed. • Unnatural behaviour would decrease the validity of findings about patient care as it would not reflect a true to life account of the context and actions that normally take place.	**(12)**

Answer 1 of 6 · Question 6 part whole · 12 marks

2024 JUN · Paper 02 · extract 2 of 3 · find part whole in this mark scheme extract

Level	Mark	Descriptor
	0	No rewardable material.
Level 1	1–3	• Demonstrates limited knowledge and understanding of psychological processes and procedures, may not always be relevant (AO1). • Little or no application of psychological processes and procedures to the context (AO2). • Limited attempt to evaluate psychological processes and procedures. Little or no connections between the elements in the question, with unsupported, generic judgements. Limited conclusion that is not fully justified (AO3).
Level 2	4–6	• Demonstrates mostly accurate knowledge and understanding of relevant psychological processes and procedures (AO1). • Some application of psychological processes and procedures to the context but may be limited or lack relevance (AO2). • Some attempt to evaluate psychological processes and procedures but may draw on limited evidence. Mostly logical chains of reasoning, leading to judgements. Basic conclusion reached but may be superficial (AO3).
Level 3	7–9	• Demonstrates accurate and thorough knowledge and understanding of relevant psychological processes and procedures (AO1). • Relevant and accurate application of psychological processes and procedures to the context (AO2). • Sustained and accurate evaluation of psychological processes and procedures, supported with accurate evidence. Sustained and logical chains of reasoning, leading to relevant judgements with justified conclusion (AO3).
Level 4	10–12	• Demonstrates comprehensive and accurate knowledge and understanding of relevant psychological processes and procedures throughout (AO1). • Sustained relevant and accurate application of psychological processes and procedures to the context (AO2). • Comprehensive evaluation of psychological processes and procedures supported with accurate and thorough use of evidence. Sustained and logical chains of reasoning, leading to fully supported judgements with well-justified conclusion (AO3).

Question number	Indicative content	Mark
7	AO1 = 4 marks; AO2 = 4 marks; AO3 = 4 marks Markers must apply the descriptors in line with the general marking guidance (on pages 2–3). Due to the intrinsic links between the skills, if a response evidences performance against only one trait/skill it will be for demonstrating knowledge and understanding. An answer displaying qualities of AO1 only, cannot be awarded more than the top of Level 1, no matter how strong the performance is in AO1. AO1 • Structured observations allow the observer to carefully control the setting and apparatus. • Participants can be either aware of the observation, making it overt; or unaware they are being observed making it covert. • Overt observations allow the researcher to meet ethical issues of informed consent and right to withdraw. • Naturalistic observations take place in real-life settings where the researcher does not manipulate the context. AO2 • Ainsworth used a structured observation with standardised procedures for the mother to follow and used the same toys with each infant observed. • Mothers were aware of the eight phases in the observation, but the infants were observed covertly. • The mothers would be able to agree to take part and stop taking part if their infant was too distressed by the observation. • The room was artificial not natural, meaning the mother and infant behaviour in the phases may not reflect their real-life behaviour at home. AO3 • Strict controls mean the observation can be replicated to test the reliability of findings about human behaviour such as attachment. • By using covert observations issues of social desirability can be reduced, as the infants would be behaving naturally so the findings would be more valid to human behaviour. • Overt observation would mean the mothers were aware of the aims which can lead to demand characteristics, so the findings may not represent the mother's natural behaviour. • Artificiality reduces the ecological validity of the observed attachment behaviours, so results may not represent how infants and mothers would behave in natural settings.	**(12)**

Question number	Indicative content	Mark
5	AO1 = 4 marks; AO2 = 4 marks; AO3 = 4 marks Markers must apply the descriptors in line with the general marking guidance (on pages 2–3). Due to the intrinsic links between the skills, if a response evidences performance against only one trait/skill it will be for demonstrating knowledge and understanding. An answer displaying qualities of AO1 only, cannot be awarded more than the top of Level 1, no matter how strong the performance is in AO1. AO1 • Case studies are not representative of a larger population as they usually focus on one person's individual experiences. • A case study gathers in-depth and detailed qualitative data about a person's life. • Case studies can follow the ethical requirements of the BPS to ensure risk to the participant is limited. • A researcher can combine different research methods in a case study to check their findings and make comparisons. AO2 • HM had an operation that had unexpected side effects that provides a rare opportunity to study memory impairment. • In the case of HM he was studied for over 50 years which gives in depth and detailed information about his progress. • HM struggled to remember beyond his short-term memory, so may not have been aware of taking part in research. • Being observed and completing experimental tasks meant the data gathered about HM came from multiple research methods. AO3 • Rare conditions such as HMs memory loss are unique to the one person which can limit the generalisability of findings. • Researching HM for most of his adult life gave detailed data that is a valid representation of how memory affected him. • In brain damage cases like HM, it is questionable as to whether ethical guidelines such as informed consent can be fully achieved. • Reliability of case study data can be improved when those being studied repeat experimental tasks to retest findings.	**(12)**

Section B
Criminal psychology – Why do people become criminals?

Type MS · Observations and case studies

Answer 4 of 6 · Question 2 part a · 1 mark

2021 NOV · Paper 02 · extract 1 of 3 · find part a in this mark scheme extract

Question number	Answer	Mark
2(a)	**One** mark for correct knowledge of an observation For example: • An observation is where the researcher records behaviours they see displayed by their sample group (1). Accept any other appropriate response	(1)

Type MS · Observations and case studies

Answer 4 of 6 · Question 2 part a · 1 mark

2021 NOV · Paper 02 · extract 2 of 3 · find part a in this mark scheme extract

Question number	Answer	Mark
2(b)	**One** mark for understanding of sampling method **One** mark for application to the scenario For example: • An opportunity sample is of those who are available at the time (1), so Yolanda may record the activities of any children who happen to be playing during her time in the setting (1). Accept any other appropriate response	(2)

Question number	Answer	Mark
2(c)(i)	**One** mark for correct calculation of children who played with arts and crafts toys. **One** mark for correct answer. Calculation: 74-23-11-29= • 11 Calculation: 11:11 simplified using a common factor • 1:1 Accept any other appropriate response.	(2)

Question number	Answer	Mark
2(c)(ii)	**One** mark for calculation of percentage of children who played with role play toys. **One** mark for answer to two decimal places. • (29/74)*100 = 39.189189% • 39.19% (2d.p) Accept any other appropriate response.	(2)

Question number	Answer	Mark
2(d)	**One** mark for conclusion made. **One** mark for justification of conclusion through analysis of data. • Boys prefer to play with stereotypically male toys (1) as there were 13 more boys observed playing with vehicles than girls (1). Accept any other appropriate response.	(2)

Type MS · Observations and case studies

Type MS · Observations and case studies

Answer 5 of 6 · Question 2 part a · 2 marks

2023 JUN · Paper 02 · extract 1 of 2 · find part a in this mark scheme extract

Question number	Answer	Mark
2(a)	**One** mark for understanding of observation research method. **One** mark for application to the scenario. • An observation research method can allow a researcher to record naturally occurring behaviour in a situation (1) so Kamira will be able to record how the different people actually respond to someone else's property that has been lost in a realistic way (1). Accept any other appropriate response.	(2)

Question number	Answer	Mark
2(b)	**One** mark for drawing an appropriate table structure. **One** mark for appropriate column headings. **One** mark for appropriate row headings. For example: **Behaviour of passers-by** / **Tally** / **Frequency** **Ignored the item** **Gave the item to staff** **Took the item** Accept any other appropriate response.	(3)

Question number	Answer	Mark
2(c)	**One** mark for understanding of a situational variable. **One** mark for application to the scenario. • A situational variable is a variable created from the context or environment in which a study takes place that can affect the results (1) so Kamira may have considered the location of the observation so that she was not near the security office which may change the likelihood of returning the item (1). Accept any other appropriate response.	(2)

2024 JUN · Paper 02 · extract 1 of 3 · find part a in this mark scheme extract

Question number	Answer	Mark
5(a)	**One** mark for correct knowledge of a case study. • A case study is in-depth research often undertaken with a single person that collects a range of data using different methods (1). Accept any other appropriate response.	(1)

Question number	Answer	Mark
5(b)	**One** mark for correct knowledge of quantitative data. **One** mark for an appropriate example from the scenario. • Quantitative data is data that can be counted or measured numerically (1), such as measuring the alcohol consumed by the patient each week in units (1). Accept any other appropriate response.	(2)

Question number	Answer	Mark
5(c)	**One** mark for an appropriate estimation. 300 - 60 • 240 Accept any other appropriate response.	(1)

Question number	Answer	Mark
5(d)	**One** mark for correct calculation of the mode for units of alcohol consumed. • 79 (1). Reject all other answers.	(1)

Type MS · Observations and case studies

Answer 6 of 6 · Question 5 part a · 1 mark

2024 JUN · Paper 02 · extract 2 of 3 · find part a in this mark scheme extract

Question number	Answer	Mark
5(e)	**One** mark for correct rank ordering. **One** mark for correct answer. • Rank ordering: 34 45 63 70 72 77 79 79 • (70+72)/2 = 71 Accept any other appropriate response.	(2)

Question number	Answer	Mark
5(f)	**One** mark for accurately giving 12.81924 to two decimal places. For example; • 12.82 (1). Reject all other answers.	(1)
