10 Dries was investigating whether humans process information in an active or a passive way. He gave participants a paragraph where the words had the correct first and last letter but all the rest in the middle were jumbled. Participants had to say whether they could read the paragraph or not.

Dries considered information processing to be active if the participants could read the paragraph but passive if they could not read the paragraph.

The results are shown in **Table 2**.

Condition	Percentage (%)
Participants who could read the paragraph	98%
Participants who could not read the paragraph	2%

Table 2

Explain **one** conclusion that could be made from **Table 2** regarding how humans process information.

9 Megan was interested in investigating participants' memory of a story.

Megan went into a school in Japan and asked the children to read an unfamiliar story about a sea adventure that included unknown names, contained unusual content and had 330 words.

The children were asked to read the story twice and were then asked to try to reproduce the story the next day at school by writing it out on a piece of paper. They were then asked to try to recall the story once every six weeks, over a 24-week period.

The results of Megan's investigation are shown in **Table 1**.

Reproduction	Average number of words accurately recalled	Average number of errors compared to original story
The next day	180	5
After 6 weeks	120	8
After 12 weeks	80	10
After 18 weeks	50	14
After 24 weeks	30	18

9 Dekota wanted to investigate the difference between retrograde and anterograde amnesia.

She asked one participant with retrograde amnesia and one participant with anterograde amnesia to perform two tasks and recorded their performance.

Task 1: A complex picture was shown to the participants. The participants were asked to reproduce the picture after a 15-minute delay. The reproduction of the picture was scored out of 36.

Task 2: Participants were asked 100 factual questions about real news events that occurred before they suffered from amnesia.

Dekota compared the performance of her two participants with a control participant who did not suffer from amnesia.

Table 1 shows Dekota's results.

	Task 1 Picture task (score out of 36)	Task 2 News events task (score out of 100)
Participant with retrograde amnesia	26	40
Participant with anterograde amnesia	8	80
Control participant with no amnesia	33	97
