Type MS · Social learning theory and the Bobo doll study

Answer 1 of 10 · Question 12 part whole · 9 marks

2023 JUN · Paper 02 · extract 1 of 3 · find part whole in this mark scheme extract

Question number	Indicative content	Mark
12	AO1 = 3 marks; AO2 = 3 marks; AO3 = 3 marks Markers must apply the descriptors in line with the general marking guidance (on pages 2–3). Due to the intrinsic links between the skills, if a response evidences performance against only one trait/skill it will be for demonstrating knowledge and understanding. An answer displaying qualities of AO1 only, cannot be awarded more than the top of Level 1, no matter how strong the performance is in AO1. AO1 • Bandura, Ross and Ross (1961) claimed that children appear to learn by imitation, and this seems more likely if the adult role model is male. • Participants in the aggressive groups in their study reproduced more physical and verbal aggressive behaviour than those in the non-aggressive groups. • Bandura, Ross and Ross (1961) found that boys imitated more physical aggression than girls, although verbal aggression was similar in boys and girls. AO2 • Captain Michael is a male role model to Delun, so he has imitated the behaviour he has seen the superhero demonstrate in the television show. • Delun has reproduced the behaviour of Captain Michael at school where he considered the boy to be a villain, so he jumped on him to save the other child. • Delun is a young boy and is more likely to imitate the physical aggression he sees in the Captain Michael television show than he would if the superhero was a girl. AO3 • Charlton et al. (2000) found that there was little change in pro- or anti-social behaviour replicated by children after the introduction of television, so aggressive behaviour may not be from imitation of television characters. • Bandura, Ross and Ross (1961) conducted their study within a controlled environment which strengthens their findings that being exposed to an aggressive role model influenced the way children then played with the Bobo doll. • Aggression may not be due to imitation of role models, but due to nature, such as the MAOA gene which may explain the differences between boys and girls, so Bandura, Ross and Ross (1961) may not fully explain Delun's behaviour.	**(9)**

Answer 1 of 10 · Question 12 part whole · 9 marks

2023 JUN · Paper 02 · extract 2 of 3 · find part whole in this mark scheme extract

Level	Mark	Descriptor
	0	No rewardable material.
Level 1	1–3	• Demonstrates isolated elements of knowledge and understanding of a limited range of psychological ideas (AO1). • Provides little or no reference to relevant psychological ideas related to the context (AO2). • Limited attempt to deconstruct relevant psychological ideas. Limited consideration of supporting/refuting evidence, leading to generic judgements (AO3).
Level 2	4–6	• Demonstrates mostly accurate understanding of some relevant psychological ideas (AO1). • Provides some reference to relevant psychological ideas related to the context but this may be limited or lack relevance at times (AO2). • Deconstructs relevant psychological ideas using mostly logical chains of reasoning. Some consideration of supporting/refuting evidence, leading to a judgement (AO3).
Level 3	7–9	• Demonstrates accurate and thorough knowledge and understanding of relevant psychological ideas (AO1). • Provides sustained reference to relevant psychological ideas related to the context (AO2). • Deconstructs relevant psychological ideas using logical chains of reasoning. Sustained consideration of supporting/refuting evidence, showing an awareness of competing arguments, leading to a judgement (AO3).

The self – What makes you who you are?

Type MS · Social learning theory and the Bobo doll study

Answer 2 of 10 · Question 13 part whole · 4 marks

2019 JUN · Paper 02 · extract 1 of 2 · find part whole in this mark scheme extract

Question number	Answer	Mark
13	**One** mark for identification of each way (maximum **two** marks). **One** mark for reasoning/justification of each way identified through theory (maximum **two** marks). For example: • Siobhan may have observed her new friends misbehaving when they are all together (1). Social learning theory claims that through observational learning Siobhan will reproduce the behaviour of the friends she pays attention to (1). • Her new friends are the same age as Siobhan, so she identifies with them (1). Bandura (1977) would suggest she will therefore be more likely to reproduce the behaviour she has seen modelled by her new friends (1). Accept any other appropriate response.	**(4)**

Answer 4 of 10 · Question 14 part whole · 9 marks

2021 NOV · Paper 02 · extract 1 of 3 · find part whole in this mark scheme extract

Question number	Indicative content	Mark
14	AO1 = 3 marks; AO2 = 3 marks; AO3 = 3 marks Markers must apply the descriptors in line with the general marking guidance (on pages 2–3). Due to the intrinsic links between the skills, if a response evidences performance against only one trait/skill it will be for demonstrating knowledge and understanding. An answer displaying qualities of AO1 only, cannot be awarded more than the top of Level 1, no matter how strong the performance is in AO1. AO1 • Social learning theory states that a person will imitate the behaviour of a role model who they consider to have high status or importance to them. • Observers will pay attention to a behaviour and retain this behaviour in memory for reproduction at a later date. • Motivation to reproduce behaviour can be from vicarious reinforcement, where the observer sees the role model receive positive reinforcement for their actions. AO2 • Madeline may look up to her supervisor because she is of a higher status in the workplace than Madeline is. • Madeline observed the stealing behaviour of the supervisor and then retained this to be able to reproduce it when she stole clothes and money herself. • The supervisor is complimented for how nice she looks which would vicariously reinforce Madeline to steal herself so she can receive the same positive reinforcement. AO3 • Bandura, Ross and Ross (1961) found that children would imitate the behaviour of adults who were of a higher status to them, suggesting Madeline would behave similarly. • Social learning theory does not take into account other factors such as Madeline having no money to buy the clothes, so may not fully explain her stealing from the shop. • Madeline may be biologically predisposed to criminality because of her personality type, so stealing from the shop may not have been a result of vicarious learning.	**(9)**

Question number	Answer	Mark
8	Up to **two** marks for understanding of vicarious reinforcement. For example: • A person observes someone else being rewarded for criminal activities and actions (1) so the observer replicates the criminal behaviour to gain the same reward (1). Accept any other appropriate response.	**(2)**

Type MS · Social learning theory and the Bobo doll study

Answer 6 of 10 · Question 10 part whole · 2 marks

2022 JUN · Paper 02 · find part whole in this mark scheme extract

Question number	Answer	Mark
10	**One** mark for identification of a reason. **One** mark for reasoning/justification through a theory. For example: • Jayne may see Harriet as a role model, so have paid attention to the fighting and swearing behaviour that Harriet displayed at school (1). Social learning theory would suggest observational learning shows why Jayne retained this behaviour and reproduced it on another occasion in the fight with her sister (1). Accept any other appropriate response.	**(2)**

Type MS · Social learning theory and the Bobo doll study

Answer 9 of 10 · Question 12 part whole · 4 marks

2024 JUN · Paper 02 · extract 1 of 2 · find part whole in this mark scheme extract

Question number	Answer	Mark
12	**One** mark for identification of each way (maximum **two** marks). **One** mark for justification, which must be linked to the way identified (maximum **two** marks). For example: • Kevin is male and had observed two girls taking part in the aggressive fighting which means he is less likely to copy the aggression and get in a fight (1), as boys imitated more physical and verbal aggression after being exposed to the male aggressive role model than to a female aggressive role model (1). • Chloe may not have considered either of the girls she observed fighting to have been role models, so she walked away and did not imitate the fighting behaviour (1). Bandura, Ross, and Ross (1961) found exposure to aggressive role models may increase aggressive reactions, but this may not apply to people who are not seen as role models (1). Accept any other appropriate response.	**(4)**
