Practice workbook · Darwin: why non-verbal communication evolved

Darwin (1872): non-verbal signals as inherited, survival-serving behaviours.

3 question parts: 1 worked-example retry and 2 further practice parts.
Name: _____ Class: _____ Date: _____

Practise one question type at a time. Attempt the part inside the red boundary; the rest of the question and any figures are kept for context. Write your working in the answer space.

The first question is a retry of the website worked example, without its solution. Check your answers online with 'Check my answer', or ask your teacher for the answer booklet.

Type ID: PSY-LAN-06

1. Question 39 · part whole · 4 marks

2023 JUN · Paper 02

Worked-example retry · Attempt part whole only.

39 George and Edward were arguing about who was the best at sport. George instinctively narrowed his eyes at Edward and said he was the best sportsman. Edward creased his eyebrows, frowned at George, and then called him a liar.

George unfolded his arms and bared his teeth. Edward froze, clenched his jaw, and glared at George. Both George and Edward tensed their muscles, and their breathing rate became faster.

Explain **two** ways that Darwin's (1872) theory of evolution can account for the non-verbal communication during the argument.

39 Marshall visited the local zoo and went to see the primates. When he was at the primate enclosure, he saw a baby chimpanzee looking at its mother and pulling at her fur. The mother responded by stroking her baby chimpanzee and then feeding him.

A second chimpanzee began to approach the mother and baby, and the mother bared her teeth and made a screeching noise at the approaching chimpanzee, which turned and went away.

Explain **two** reasons for the communication shown by the chimpanzees at the zoo.

You must use Darwin's (1872) theory of evolution to justify your answer.
