Type MS · Yuki et al. (2007): eyes or mouth?

Answer 1 of 6 · Question 38 part whole · 2 marks

2025 JUN · Paper 02 · extract 1 of 2 · find part whole in this mark scheme extract

Question Number	Answer	Mark
38	**One** mark for identification of a reason. **One** mark for reasoning/justification through the study. For example: • The difference of opinion may have occurred as Callum focused on cues shown in the mouth such as smiling whereas Itsuki looked at facial cues from Emma's eyes which may show higher levels of happiness (1), as Yuki et al. (2007) found that American people gave more consideration to cues from the mouth when judging emotions in both emoticons and real faces whereas Japanese people focus on other facial cues such as from the eyes (1). Accept any other appropriate response.	**(2)**

Type MS · Yuki et al. (2007): eyes or mouth?

Answer 2 of 6 · Question 40 part whole · 2 marks

2019 JUN · Paper 02 · find part whole in this mark scheme extract

Question number	Answer	Mark
40	**One** mark for relevant understanding of Yuki et al. (2007). **One** mark for application to understanding why Kenji may be unsure what the emoticon symbol means. For example: • Yuki et al. (2007) found that the Japanese gave more consideration to cues from the eyes when considering the emotion of a symbol (1) so Kenji would find it difficult to determine the emotions of the :) symbol as it has a focus on the mouth to show emotion and not the eyes (1). Accept any other appropriate response.	**(2)**

Type MS · Yuki et al. (2007): eyes or mouth?

Answer 3 of 6 · Question 39 part whole · 4 marks

2020 NOV · Paper 02 · extract 1 of 2 · find part whole in this mark scheme extract

Question number	Answer	Mark
39	**One** mark for identification of each reason (maximum **two** marks). **One** mark for justification which must be linked to the reason identified (maximum **two** marks). For example: Strength: • The students can check their findings against Yuki et al. (2007) to ensure the task itself is a valid measure of emotional recognition in their four chosen countries (1) as they are using the same emoticons task to test emotional recognition of eyes and mouths across cultures (1). Weakness: • The use of symbolic emoticons such as :) is an outdated form of communication so the task the students have used lacks validity (1) meaning that their test of cultural differences is not an appropriate measure of the eyes and mouth as a cue so emojis should have been used (1). Accept any other appropriate response.	**(4)**

Type MS · Yuki et al. (2007): eyes or mouth?

Answer 4 of 6 · Question 40 part whole · 2 marks

2021 NOV · Paper 02 · extract 1 of 2 · find part whole in this mark scheme extract

Question number	Answer	Mark
40	**One** mark for identification of reason. **One** mark for reasoning/justification through a study. For example: • The emoticon Rhianna used has a smiling mouth which is showing a happy emotion using the face so they would know she is feeling happy about winning the competition (1) because Yuki et al. (2007) found that Americans gave more consideration to the cues from the mouth when interpreting emoticons (1). Accept any other appropriate response.	**(2)**

Type MS · Yuki et al. (2007): eyes or mouth?

Answer 5 of 6 · Question 34 part whole · 1 mark

2022 JUN · Paper 02 · find part whole in this mark scheme extract

Question number	Answer	Mark
34	C - 95 Japanese students **The only correct answer is C** A is incorrect as this was the number of male Japanese students B is incorrect as this was the number of female USA students D is incorrect as this was the number of USA students	**(1)**

Type MS · Yuki et al. (2007): eyes or mouth?

Answer 6 of 6 · Question 40 part whole · 4 marks

2024 JUN · Paper 02 · extract 1 of 2 · find part whole in this mark scheme extract

Question number	Answer	Mark
40	**One** mark for identification of each way (maximum **two** marks). **One** mark for justification which must be linked to the way identified (maximum **two** marks). For example: • Western students may place more focus on the mouth when determining happiness scores, so there was little difference in the average rating for emoticons A and B as the mouths were the same (1). Yuki et al. (2007) found that Americans gave more consideration to the cues from the mouth when determining the emotion expressed by an emoticon (1). • The average score from students from Eastern countries showed a greater difference for emoticon A and B suggesting they may have interpreted them using the eyes which were different on each emoticon (1), as Japanese participants in Yuki et al. (2007) gave higher happiness rating scores to emoticons with happier eyes where there was a neutral mouth (1). Accept any other appropriate response.	**(4)**
