Practice workbook · Carmichael, Hogan and Walter (1932): words change what we see

The study showing verbal labels change how ambiguous drawings are reproduced.

6 question parts: 1 worked-example retry and 5 further practice parts.
Name: _____ Class: _____ Date: _____

Practise one question type at a time. Attempt the part inside the red boundary; the rest of the question and any figures are kept for context. Write your working in the answer space.

The first question is a retry of the website worked example, without its solution. Check your answers online with 'Check my answer', or ask your teacher for the answer booklet.

1. Question 26 · part whole · 9 marks

2025 JUN · Paper 02

Worked-example retry · Attempt part whole only.

***26** Jesse tested whether verbal cues would affect perception of visual images. He chose six ambiguous images which included two circles, a rectangle and a triangle, as shown in **Figure 4**.

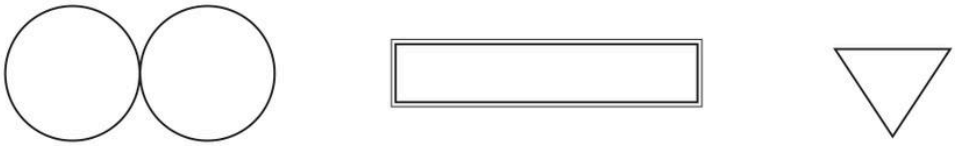

Figure 4

20 male participants were split into two groups and shown the ambiguous images electronically on a screen. Group 1 were provided with descriptions such as 'ice cream cone' before being shown the triangle. Group 2 were not given any descriptions. Jesse asked participants to redraw the images seen.

Jesse found that Group 1 drawings were more similar to the descriptions given, for example, an ice cream cone. Group 2 drawings were more similar to the original drawings, for example, the triangle.

Assess how well Carmichael, Hogan and Walter (1932) can account for the results of Jesse's study.

27 Kia is planning to replicate the study by Carmichael, Hogan and Walter (1932). She wants to see whether the effect of language on visual perception of images is similar for modern day images in 2019 for the general public.

Kia wants to make sure that the procedure of her study follows the original research as closely as she can, however Kia will need to make some changes.

Explain **two** ways Kia could change the procedure for her replication.

25 Zak was shown ten shapes in a perception test. He was given the name of each of the shapes before seeing them. After he saw all ten shapes Zak was shown pairs of shapes that contained the original shape and a slightly adapted version. Zak then had to identify which shape was the original.

Figure 3 shows an example of original and paired shapes. Zak was given the name 'magnifying glass' when shown the original shape.

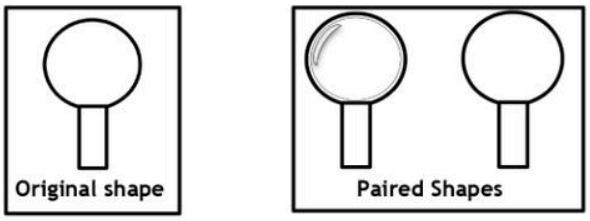

Figure 3

Explain **two** reasons why Zak may not correctly identify all ten of the original shapes.

You must use a study to justify your answer.

27 Rose was drawing a map to give directions so her friend Alena can find the way from Rose's house to the shopping centre. Rose drew several landmarks on the map to help Alena find her way.

Alena took several wrong turns when walking to the shopping centre using the map. She interpreted the drawings of the landmarks incorrectly, for example Alena thought the drawing of a pond was a roundabout.

Explain **two** ways that Carmichael, Hogan and Walter (1932) could account for Alena's interpretation of the map.

***26** Steven and Thomas were shown images of 10 ambiguous figures during a laboratory experiment. At each presentation of the image, a word for the image was read out. Steven and Thomas were read a different word for each image.

An example of an ambiguous figure and the words that were read to Steven and Thomas is shown in **Figure 2**.

Word read to Steven: Ruler

Word read to Thomas: Comb

Figure 2

When they were asked to draw the images, some of the pictures that Steven and Thomas drew looked different to the original images they had been shown.

Assess how well Carmichael, Hogan and Walter (1932) can explain why Steven and Thomas produced drawings that were different to the ambiguous figures.

26 Helga and Lena were asked by their manager to draw a map of the nature reserve where they worked. As Helga was drawing her map, the nature reserve warden commented that she should make sure the river showed some canoes that could be hired.

Helga and Lena finished drawing their maps. The manager commented that the boats on the lake on Helga's map looked like canoes on a river, but on Lena's map they looked just like the boats on the lake at the nature reserve.

Explain **two** ways the findings from Carmichael, Hogan, and Walter (1932) could account for Helga's and Lena's drawings.
