Practice workbook · Zeitgebers, light and Siffre's cave study

External cues (mainly light) that entrain the sleep-wake cycle, and Siffre's study of living without them.

9 question parts: 1 worked-example retry and 8 further practice parts.
Name: _____ Class: _____ Date: _____

Practise one question type at a time. Attempt the part inside the red boundary; the rest of the question and any figures are kept for context. Write your working in the answer space.

The first question is a retry of the website worked example, without its solution. Check your answers online with 'Check my answer', or ask your teacher for the answer booklet.

33 Leonardo is training to be an astronaut. As part of his training, he spends four months in isolation in a purpose-built soundproof laboratory where there is no natural light. Leonardo is observed during these four months completing tasks to test his memory processing and dexterity.

During his time in the laboratory, Leonardo begins to lose track of the days and struggles to know when to sleep. He finds it increasingly difficult to complete tasks, such as finishing a crossword puzzle and sewing buttons onto a shirt.

Explain **two** ways the findings from Siffre (1975) could account for Leonardo's behaviour.

34 Nick works night shifts. He is struggling to sleep during the day and stay awake at night. His friend David has suggested Nick should buy dark curtains to block light during the day. He also suggested a special daylight lamp to help wake Nick up for work at night.

Explain **two** reasons why David's suggestions may help Nick with his sleep pattern.

You must refer to zeitgebers to justify your answer.

Reason one:

Reason two:

27 Identify **one** measure used to gather data in Siffre (1975) during the time he was in the cave.

- ☒ **A** Handwriting analysis
- ☒ **B** Memory tests
- ☒ **C** Speech assessment
- ☒ **D** Dream analysis

***35** The most northern and southern parts of the world do not have the same day and night cycle of sunrise and sunset that other areas of the world have.

These regions can experience up to six months of continuous daylight with no sunset and darkness, and then six months of continuous darkness with no sunrise and daylight.

People living in the communities in these regions of the world would experience very few, if any, natural external cues of light and dark during those times. This can affect their sleep-wake cycle.

Assess how well Siffre (1975) can explain the effect of having limited light or dark for six months on the people living in these regions.

31 Chris was completing astronaut training in an underground bunker. During this time Chris had no natural light and could only use a lamp to provide light.

Chris tended to be awake for over 20 hours and slept for around 7 hours. At the end of the training, Chris believed he had been in the underground bunker for 12 days; however, it had actually been 15 days.

Explain **one** reason why Chris may not have realised he had been in the underground bunker for 15 days.

You must use a study to justify your answer.

***33** Artez is a paramedic who works night shifts. He is worried about his sleep pattern because he can feel tired at work. Artez asks a colleague how they manage their sleep pattern when working nights. She tells Artez that it may be easier if he tries to carry on sleeping in the day and staying awake at night when he is not working.

The colleague also suggests the use of bright lighting when Artez wakes up, and extra thick curtains for sleeping in the daytime. She recommends that Artez should have a big breakfast as soon as he can when he wakes up, and make sure he has a light meal when he finishes work, and then leave a couple of hours before going to bed.

Assess how well the use of external influences could help Artez with his sleep.

31 Tallulah plays rugby every Sunday. She trains very hard because she wants to earn a place in her national team. Tallulah wants to be well rested for her rugby matches, but she often struggles to go to sleep at the time she wants to.

Her rugby coach suggests that Tallulah should turn the lights off an hour before her bedtime to help with her sleep pattern.

Explain how turning the lights off an hour before her bedtime could help Tallulah get to sleep on time.
