Answer 1 of 7 · Question 20 part whole · 9 marks

2024 JUN · Paper 02 · extract 1 of 3 · find part whole in this mark scheme extract

Question number	Indicative content	Mark
20	AO1 = 3 marks; AO2 = 3 marks; AO3 = 3 marks Markers must apply the descriptors in line with the general marking guidance (on pages 2–3). Due to the intrinsic links between the skills, if a response evidences performance against only one trait/skill it will be for demonstrating knowledge and understanding. An answer displaying qualities of AO1 only, cannot be awarded more than the top of Level 1, no matter how strong the performance is in AO1. AO1 • Baumeister (2008) suggests qualities like self-control, being rational, and a sense of autonomy are involved in free will. • He claims that a disbelief in free will can result in people acting in harmful ways for themselves or society. • Free will is said to be an advanced level of control humans have in order to make prosocial choices even if these are in contradiction to a base human instinct or desire. AO2 • George lacks rationality and self-control as he wants to blame the teacher for his lack of work and is rude to Suzie who is trying to help him complete some revision. • By believing that it is too late for revision, George is showing that he does not use a freedom to choose his role in his learning, but instead sees a poor exam result as determined. • Despite having time to revise with Suzie, he has given in to an instinct to protect himself from distress that may come from failing the exam by saying he does not care about it. AO3 • Baumeister et al. (2006) found that inducing participants to disbelieve in free will made them more aggressive and less helpful toward others, which explain why George was rude. • Determinism assumes there may be no human action that can change the outcome of an event, which may be the case for George as it is plausible it is now too late to pass the exam. • Vohs and Schooler (2008) found that participants who disbelieved in free will were more likely to cheat on a test, thus making a choice that was instinctive rather than prosocial.	**(9)**

Answer 1 of 7 · Question 20 part whole · 9 marks

2024 JUN · Paper 02 · extract 2 of 3 · find part whole in this mark scheme extract

Level	Mark	Descriptor
	0	No rewardable material.
Level 1	1–3	• Demonstrates isolated elements of knowledge and understanding of a limited range of psychological ideas (AO1). • Provides little or no reference to relevant psychological ideas related to the context (AO2). • Limited attempt to deconstruct relevant psychological ideas. Limited consideration of supporting/refuting evidence, leading to generic judgements (AO3).
Level 2	4–6	• Demonstrates mostly accurate understanding of some relevant psychological ideas (AO1). • Provides some reference to relevant psychological ideas related to the context but this may be limited or lack relevance at times (AO2). • Deconstructs relevant psychological ideas using mostly logical chains of reasoning. Some consideration of supporting/refuting evidence, leading to a judgement (AO3).
Level 3	7–9	• Demonstrates accurate and thorough knowledge and understanding of relevant psychological ideas (AO1). • Provides sustained reference to relevant psychological ideas related to the context (AO2). • Deconstructs relevant psychological ideas using logical chains of reasoning. Sustained consideration of supporting/refuting evidence, showing an awareness of competing arguments, leading to a judgement (AO3).

Answer 2 of 7 · Question 19 part whole · 2 marks

2019 JUN · Paper 02 · find part whole in this mark scheme extract

Question number	Answer	Mark
19	**One** mark for demonstrating accurate understanding of study. **One** mark for exemplification of how the study can be used to explain the scenario. For example: • Vohs and Schooler (2008) found that a reduction in a belief in free will increased cheating behaviours (1), so the teacher could help the classes increase their belief in free will which would reduce their cheating behaviour on the class tests (1). Accept any other appropriate response.	**(2)**

Answer 5 of 7 · Question 15 part whole · 2 marks

2022 JUN · Paper 02 · extract 1 of 2 · find part whole in this mark scheme extract

Question number	Answer	Mark
15	Up to **two** marks for understanding the influence of free will on socially desirable behaviour. For example: • Free will is the belief that human behaviour is a product of personal, individual choice (1) so a belief in free will increases the likelihood of a person being self-motivated to engage in socially desired behaviours (1). Accept any other appropriate response.	**(2)**

Answer 6 of 7 · Question 19 part whole · 9 marks

2023 JUN · Paper 02 · extract 1 of 3 · find part whole in this mark scheme extract

Question number	Indicative content	Mark
19	AO1 = 3 marks; AO2 = 3 marks; AO3 = 3 marks Markers must apply the descriptors in line with the general marking guidance (on pages 2–3). Due to the intrinsic links between the skills, if a response evidences performance against only one trait/skill it will be for demonstrating knowledge and understanding. An answer displaying qualities of AO1 only, cannot be awarded more than the top of Level 1, no matter how strong the performance is in AO1. AO1 • Vohs and Schooler (2008) found a strong negative correlation between cheating behaviour and free will scores on the questionnaire. • Participants who read the anti-free-will passage cheated on the mental arithmetic problems more often than those in the control group. • Vohs and Schooler (2008) suggested their findings raised concerns for the development of moral behaviour if deterministic perceptions of individuals are promoted. AO2 • The students who deleted the chat message and did not look at the questions or answers may have a stronger belief in free-will. • Some students may believe their ability is already determined as they had not worked hard in their history lessons so far, so they chose to cheat instead of revise. • The students at the front of the classroom who photographed the questions and answers may believe it was more important to pass the test than to demonstrate their ability in history. AO3 • Vohs and Schooler (2008) may not fully explain the student's behaviour as it does not account for individual differences such as self-confidence and high self-esteem which could be why some students deleted the message and did not cheat. • The findings may help identify the reasons for cheating in the class which can then be combatted by raising the student's belief in free-will and prevent further cheating behaviour. • Kohlberg (1958) would suggest that morality may not relate to determinism but may be the interpersonal relationships between the student and teacher where the students at the front do not seek approval or feel they need to be perceived as 'good' by the teacher.	**(9)**
