Practice workbook · Bodily rhythms: circadian and ultradian

Internal biological cycles that govern sleep and waking, with strengths and weaknesses as an explanation.

6 question parts: 1 worked-example retry and 5 further practice parts.
Name: _____ Class: _____ Date: _____

Practise one question type at a time. Attempt the part inside the red boundary; the rest of the question and any figures are kept for context. Write your working in the answer space.

The first question is a retry of the website worked example, without its solution. Check your answers online with 'Check my answer', or ask your teacher for the answer booklet.

32 Deandre is a nurse at a local hospital. He has started working a week of day shifts followed by a week of night shifts but is having issues adjusting to his new work schedule. Deandre feels really tired during his first night shift and struggles to remain alert throughout the night.

When Deandre gets home after his night shift, he tries to fall asleep but wakes up every 30 minutes. Deandre only feels tired when he is due to go back to work that night. Deandre worries that his lack of sleep will affect his performance at work.

Explain **two** ways circadian rhythms can account for the issues Deandre is having when working night shifts.

3. Question 33 · part whole · 9 marks

2020 NOV · Paper 02

Further practice · Attempt part whole only.

***33** Libby travelled on a long distance holiday. There was a time zone difference between her home and the holiday destination.

Libby arrived at her destination at 7am and was cold and tired as it still felt like night time to her. She tried to eat some breakfast but struggled to eat and wanted to turn the lights down in the dining area. Libby went to her hotel room and fell asleep soon after breakfast and slept until late afternoon that day.

Assess how well circadian rhythms can explain the change to Libby's sleep pattern.
