Block practice · The brain and neuropsychology

Work through each question type in order. Each section has a worked-example retry and all further practice. Attempt only the part outlined in red.

Visual agnosia, prosopagnosia and pre-frontal damage

OLevels.com SCHOOL

Practice workbook · Visual agnosia, prosopagnosia and pre-frontal damage

Visual agnosia, prosopagnosia and effects of pre-frontal cortex damage.

6 question parts: 1 worked-example retry and 5 further practice parts.
Name: _____ Class: _____ Date: _____

Practise one question type at a time. Attempt the part inside the red boundary; the rest of the question and any figures are kept for context. Write your working in the answer space.

The first question is a retry of the website worked example, without its solution. Check your answers online with 'Check my answer', or ask your teacher for the answer booklet.

1. Question 18 · part a · 2 marks

2024 JUN · Paper 01

Worked-example retry · Attempt part a only.

18 Matthew has been asked to assess a patient who has had a brain injury.

He decided to give the patient a series of pictures of objects and a photograph of someone from the patient's social media page. The objects included a set of keys, a games console, and a boat's anchor. Matthew asked the patient to name what they could see in the pictures and who they saw in the photograph.

The patient could not name the objects but was able to recognise the person in the photograph.

(a) Explain what the results of Matthew's assessment indicated for the patient.

You should refer to a concept of neurological damage in your answer.

(2)

(b) Explain **one** improvement that could have been made to Matthew's assessment of the patient.

(2)

(Total for Question 18 = 4 marks)

14 Neha is a portrait artist who also works at a school part-time teaching Art. She has recently been struggling to recognise the difference between the portraits she has painted and has had trouble recognising the faces of people she knows. Neha has since been diagnosed with a neurological condition.

Explain **one** way Neha will be affected by the condition she has been diagnosed with.

You should refer to a concept of neurological damage in your answer.

19 Carl is investigating a patient who is having some difficulties.

The patient works in a chocolate factory and recently had a fall and damaged his brain. The patient works in the research and development department within the factory, creating new chocolate bars using different ingredients.

The patient has been diagnosed with visual agnosia. He has asked Carl to give him some information about how he is likely to be affected by the condition when he goes back to work.

Explain what Carl can say to the patient regarding how the condition is likely to affect him at work.

You should refer to visual agnosia in your answer.

5. Question 20 · part whole · 2 marks

2022 JUN · Paper 01

Further practice · Attempt part whole only.

20 Eder is investigating neurological damage in some brain-damaged patients.

He gives the brain-damaged patients three images:

- A picture of a kettle
- A picture of their mother
- A picture of a football

Eder asks the participants to try to name what they can see in the images provided correctly.

A summary of Eder's results are shown in **Figure 5**.

A bar chart to show the percentage (%) of brain-damaged patients who were able to name the three images correctly
