Type MS · Treating offenders: token economy and anger management

Answer 1 of 5 · Question 12 part whole · 9 marks

2025 JUN · Paper 02 · extract 1 of 3 · find part whole in this mark scheme extract

Question number	Indicative content	Mark
12	AO1 = 3 marks; AO2 = 3 marks; AO3 = 3 marks Markers must apply the descriptors in line with the general marking guidance (on pages 2–3). Due to the intrinsic links between the skills, if a response evidences performance against only one trait/skill it will be for demonstrating knowledge and understanding. An answer displaying qualities of AO1 only, cannot be awarded more than the top of Level 1, no matter how strong the performance is in AO1. AO1 • Token economy programmes are based upon principles of operant conditioning and involve using a reward system to reduce maladaptive behaviour. • When specified pro-social behaviours are shown individuals are rewarded with a token which acts as a secondary reinforcer. • Tokens can be exchanged for a primary reinforcer such as increased visitation rights which encourages repeated pro-social behaviour. AO2 • The managers and guards have identified increased levels of negative behaviours such as violence and fighting, and hope that the use of rewards will encourage pro-social behaviours. • One token will need to be given to prisoners every time they show the desirable behaviours which have been suggested by the guards such as 'not fighting for a week'. • Once prisoners have received the required number of 10 tokens, they can be exchanged in the prison shop for something that they desire and meets a basic need. AO3 • Hobbs & Holt (1971) found that using rewards for prosocial behaviours such as cooperation in young offenders, significantly increased the amount of target behaviours observed suggesting that token economies could improve the prisoner's behaviour. • Token economies may only improve behaviour if the rewards are consistently given, however terms such as 'being polite to others' are subjective and may result in a token being given for different behaviours. • Token economies are only effective if the prisoners are motivated,	**(9)**

	which may not be the case as they suggest guards will be unfair and there is nothing in the shop, meaning it is less likely to be successful in improving behaviour.	

Level	Mark	Descriptor
	0	No rewardable material.
Level 1	1–3	• Demonstrates isolated elements of knowledge and understanding of a limited range of psychological ideas (AO1). • Provides little or no reference to relevant psychological ideas related to the context (AO2). • Limited attempt to deconstruct relevant psychological ideas. Limited consideration of supporting/refuting evidence, leading to generic judgements (AO3).
Level 2	4–6	• Demonstrates mostly accurate understanding of some relevant psychological ideas (AO1). • Provides some reference to relevant psychological ideas related to the context but this may be limited or lack relevance at times (AO2). • Deconstructs relevant psychological ideas using mostly logical chains of reasoning. Some consideration of supporting/refuting evidence, leading to a judgement (AO3).
Level 3	7–9	• Demonstrates accurate and thorough knowledge and understanding of relevant psychological ideas (AO1). • Provides sustained reference to relevant psychological ideas related to the context (AO2). • Deconstructs relevant psychological ideas using logical chains of reasoning. Sustained consideration of supporting/refuting evidence, showing an awareness of competing arguments, leading to a judgement (AO3).

The self – What makes you who you are?

Type MS · Treating offenders: token economy and anger management

Answer 2 of 5 · Question 11 part whole · 2 marks

2019 JUN · Paper 02 · find part whole in this mark scheme extract

Question number	Answer	Mark
11	**One** mark for identification of strength. **One** mark for justification, which must be linked to the strength identified. For example: • Sadie will be given coping mechanisms that she can use whenever she is angry with other people such as her family (1) which will reduce her aggression as she will be able to react in a more pro-social way to things that trigger her anger (1). Accept any other appropriate response.	**(2)**

Type MS · Treating offenders: token economy and anger management

Answer 3 of 5 · Question 8 part whole · 2 marks

2020 NOV · Paper 02 · extract 1 of 2 · find part whole in this mark scheme extract

Question number	Answer	Mark
8	Up to **two** marks for understanding how token economy can increase pro-social behaviour. For example: • Secondary reinforcers are given to offenders each time they show a specified pro-social behaviour (1) that can be exchanged for something desired, like longer visitation time, encouraging repetition of pro-social behaviour (1). Accept any other appropriate response.	**(2)**

12	AO1 = 3 marks; AO2 = 3 marks; AO3 = 3 marks Markers must apply the descriptors in line with the general marking guidance (on pages 2–3). Due to the intrinsic links between the skills, if a response evidences performance against only one trait/skill it will be for demonstrating knowledge and understanding. An answer displaying qualities of AO1 only, cannot be awarded more than the top of Level 1, no matter how strong the performance is in AO1. AO1 • Anger management therapy helps a person recognise the things that trigger their anger. • The therapy helps a person replace anger with calmer responses to a situation using breathing techniques. • Clients can learn to reflect on their anger through becoming more emotionally aware. AO2 • Krystian would have a better understanding of what causes him to get into the fights he is having with his friends. • He could use breathing techniques to remain calm in situations that cause his anger and avoid getting into fights. • His father is in prison for similar behaviour which could mean Krystian has inherited his aggressive nature from his dad. AO3 • Being able to recognise signs of anger gives Krystian the ability to manage his own behaviour when he finds himself in trigger situations so he can cope with them independently. • Ireland (2000) found that prisoners who had completed anger management programmes reported they felt less anger, so the treatment may help Krystian feel less angry. • If aggression is a predisposition then anger management may not be as effective in helping Krystian manage his aggressive tendencies where he may have limited self-control.	**(9)**

Type MS · Treating offenders: token economy and anger management

Answer 5 of 5 · Question 13 part whole · 4 marks

2021 NOV · Paper 02 · extract 1 of 2 · find part whole in this mark scheme extract

Question number	Answer	Mark
13	**One** mark for identification of strength/weakness (maximum **two** marks). **One** mark for justification, which must be linked to the strength/weakness identified (maximum **two** marks). For example: Strength • Jacob and the prisoners have agreed the ratio of exchange for the credits and what luxuries they can be exchanged for (1) which is likely to make the token economy more successful as it is offering the prisoners desired consequences for pro-social behaviour (1). Weakness • The credits each day are not an immediate primary reinforcer and some prisoners may not be able to delay gratification until they have 100 (1). This makes the token economy less likely to succeed as the prisoners may not be able to achieve all 100 credits to gain the rewards they desire (1). Accept any other appropriate response.	**(4)**
