Type MS · Van Houtte & Jarvis (1995): pets and children

Answer 1 of 5 · Question 19 part whole · 9 marks

2025 JUN · Paper 02 · extract 1 of 3 · find part whole in this mark scheme extract

Question number	Indicative content	Mark
19	AO1 = 3 marks; AO2 = 3 marks; AO3 = 3 marks Markers must apply the descriptors in line with the general marking guidance (on pages 2–3). Due to the intrinsic links between the skills, if a response evidences performance against only one trait/skill it will be for demonstrating knowledge and understanding. An answer displaying qualities of AO1 only, cannot be awarded more than the top of Level 1, no matter how strong the performance is in AO1. AO1 • Van Houtte and Jarvis (1995) defined pet ownership as owning a cat or dog with no other animals included in this category. • Van Houtte and Jarvis (1995) found that children who owned pets showed higher levels of autonomy than children who did not own pets. • Fifth and sixth grade children who owned pets showed higher levels of self-esteem than fifth and sixth grade children who did not own pets. AO2 • Sammie's pet was a rabbit suggesting that she would be classed as a non-pet owner in Van Houtte and Jarvis (1995) study. • Sammie showed higher levels of autonomy after looking after her pet rabbit for a few months leading to her going to play at a friend's house. • Sammie seemed more confident in herself after looking after her rabbit suggesting that owning a pet at the age of 10 increased her self-esteem. AO3 • Sammie increased her confidence and autonomy despite being classed as a non-pet owner in Van Houtte and Jarvis (1995) study, suggesting that their results may not explain Sammie's behaviour fully. • Van Houtte and Jarvis (1995) only looked at how parents were perceived, as a measure of autonomy, rather than increased independence, so it cannot be established that pet ownership is the reason for Sammie's higher levels of autonomy. • Pets have been used as an effective intervention strategy for children/adults with low self-esteem, suggesting that the results Van Houtte and Jarvis (1995) are a reliable explanation of Sammie's behaviour. Answer 1 of 5 · Question 19 part whole · 9 marks

2025 JUN · Paper 02 · extract 2 of 3 · find part whole in this mark scheme extract

Level	Mark	Descriptor
	0	No rewardable material.
Level 1	1–3	• Demonstrates isolated elements of knowledge and understanding of a limited range of psychological ideas (AO1). • Provides little or no reference to relevant psychological ideas related to the context (AO2). • Limited attempt to deconstruct relevant psychological ideas. Limited consideration of supporting/refuting evidence, leading to generic judgements (AO3).
Level 2	4–6	• Demonstrates mostly accurate understanding of some relevant psychological ideas (AO1). • Provides some reference to relevant psychological ideas related to the context but this may be limited or lack relevance at times (AO2). • Deconstructs relevant psychological ideas using mostly logical chains of reasoning. Some consideration of supporting/refuting evidence, leading to a judgement (AO3).
Level 3	7–9	• Demonstrates accurate and thorough knowledge and understanding of relevant psychological ideas (AO1). • Provides sustained reference to relevant psychological ideas related to the context (AO2). • Deconstructs relevant psychological ideas using logical chains of reasoning. Sustained consideration of supporting/refuting evidence, showing an awareness of competing arguments, leading to a judgement (AO3).

SECTION D

Perception – How do you interpret the world around you

Type MS · Van Houtte & Jarvis (1995): pets and children

Answer 2 of 5 · Question 21 part whole · 9 marks

2019 JUN · Paper 02 · extract 1 of 3 · find part whole in this mark scheme extract

Question number	Indicative content	Mark
21	AO1 = 3 marks; AO2 = 3 marks; AO3 = 3 marks Markers must apply the descriptors in line with the general marking guidance (on pages 2–3). Due to the intrinsic links between the skills, if a response evidences performance against only one trait/skill it will be for demonstrating knowledge and understanding. An answer displaying qualities of AO1 only, cannot be awarded more than the top of Level 1, no matter how strong the performance is in AO1. AO1 • Van Houtte and Jarvis (1995) found that pet owning groups scored significantly higher for autonomy. • They found that pet owners reported higher self-esteem than non-pet owners. • The benefits of having a pet came from the presence of the pet, not attachment to it. AO2 • Confidence in making decisions for themselves increased in the children, showing that the pets helped them become more autonomous. • Increases in feelings of usefulness may indicate the children have increases in self-esteem from the presence of the pets. • The 'pets at school' service only allows the children to take ownership of a pet for short periods of time. AO3 • Van Houtte and Jarvis (1995) concluded that pets could be used as an intervention strategy for children with low self-esteem and negative self-concept, supporting that changes from the 'pets at school' service are a result of the pets. • Rogers (1951) would suggest that pets may give unconditional positive regard to their owners and thus the increase in self-esteem may be through achieving congruence when caring for the pets in school. • The experience of looking after a pet may be an external influence on the children's development of self and self-esteem highlighting the importance of nurturing positive experiences, not just the use of pets.	**(9)**

Answer 3 of 5 · Question 17 part whole · 2 marks

2020 NOV · Paper 02 · extract 1 of 2 · find part whole in this mark scheme extract

Question number	Answer	Mark
17	**One** mark for accurate understanding of Van Houtte and Jarvis (1995). **One** mark for exemplification of how study can be used to explain the scenario. For example: • Van Houtte and Jarvis (1995) suggested that the use of pets may be an appropriate source of support in times of stress (1), so the counsellor could suggest Jessica takes her neighbour's dog for walks more often than once a month as an intervention to reduce her stress (1). Accept any other appropriate response.	**(2)**

Question number	Answer	Mark
13	A – 130 **The only correct answer is A** B is incorrect as this is not the correct number of participants C is incorrect as this is not the correct number of participants D is incorrect as this is not the correct number of participants	**(1)**

Type MS · Van Houtte & Jarvis (1995): pets and children

Answer 5 of 5 · Question 19 part whole · 4 marks

2024 JUN · Paper 02 · extract 1 of 2 · find part whole in this mark scheme extract

Question number	Answer	Mark
19	**One** mark for identification of each way (maximum **two** marks). **One** mark for justification, which must be linked to the way identified (maximum **two** marks). For example: • Mable demonstrates high levels of autonomy by feeling confident in completing her schoolwork independently without the need to be in a group (1). Owning a dog may help with this independence as the findings suggested that pet ownership helped children develop greater autonomy (1). • Kelsey may have low self-esteem which is why he worries about whether other people like him and needs peer reassurance with his schoolwork (1), because he has no pets, and fifth and sixth grade non-pet owners reported lower self-esteem compared to those that did own pets (1). Accept any other appropriate response.	**(4)**
