Block practice · Development

Work through each question type in order. Each section has a worked-example retry and all further practice. Attempt only the part outlined in red.

How the brain develops before birth

Three mountains task (Piaget and Inhelder, 1956)

OLevels.com SCHOOL

Practice workbook · How the brain develops before birth

Forebrain, midbrain, hindbrain, cerebellum and medulla in early development.

4 question parts: 1 worked-example retry and 3 further practice parts.
Name: _____ Class: _____ Date: _____

Practise one question type at a time. Attempt the part inside the red boundary; the rest of the question and any figures are kept for context. Write your working in the answer space.

The first question is a retry of the website worked example, without its solution. Check your answers online with 'Check my answer', or ask your teacher for the answer booklet.

3 Finlay is a boy who was born with a healthy brain. He likes to dance and run around. His mother has two other children who like to chase Finlay. When he was 18 months old, Finlay fell out of his cot bed in his bedroom and banged his head. He was taken to hospital where they discovered that he had damaged his medulla.

Explain **one** way that Finlay could be affected by the damage to his medulla.

You should refer to the role of the medulla in your answer.

1. Question 5 · part a · 2 marks

2024 JUN · Paper 01

Worked-example retry · Attempt part a only.

5 Leanne is investigating children's development at a local school. She asks 30 pupils, aged 6 years old, 8 years old and 10 years old, to participate in her investigation.

Leanne asks the pupils to come to the gymnasium and put on a virtual reality (VR) headset, where they will see a simulation of a set of buildings. The buildings are different shapes and colours.

- A triangular blue building.
- A square red building.
- A rectangular black building.

From the pupils' perspective, the triangular building is at the front and the rectangular building is at the back of the image. The pupils are asked to say what a person living on the opposite side of the town will see.

Table 1 shows the overall responses given by the pupils.

Pupil age	Number of pupils who said the triangular building would be at the front and the rectangular building would be at the back	Number of pupils who said the rectangular building would be at the front and the triangular building would be at the back
6 years old	26	4
8 years old	13	17
10 years old	3	27

4. Question 3 · part a · 2 marks

2020 NOV · Paper 01

Further practice · Attempt part a only.

3 Sarah is investigating whether her daughter is able to see the world from the perspective of other people.

She took her daughter to the local park and asked her to look at the playground equipment. She placed a toy robot in a different location to her daughter (see **Figure 1**).

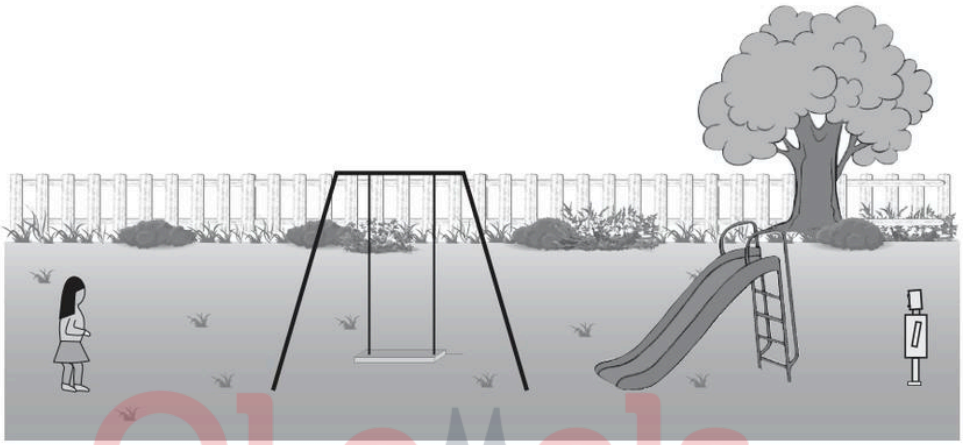

Figure 1

Sarah then asked her daughter to tell her what the toy robot can see.

Her daughter stated that the toy robot can see the swings at the front and the slide at the back.

(a) Explain which stage of cognitive development Sarah's daughter is in according to her statement.

You should refer to Piaget and Inhelder (1956) Three Mountains task in your answer.
