Type MS · Sperry (1968): split-brain patients

Answer 1 of 7 · Question 18 part a · 2 marks

2022 JUN · Paper 01 · extract 1 of 2 · find part a in this mark scheme extract

Question number	Answer	Mark
18(a)	**One** mark for accurate understanding of Sperry (1968). **One** mark for exemplification of Sperry (1968) can be used to explain the scenario. For example: • Sperry (1968) found split brain patients could not name an object from a bag if they used their left hand to pick the item (1), so Hina is likely to be unable to say to the audience that she has picked a marble from the objects in the bag (1). Accept any other appropriate response.	**(2)**

Question number	Answer	Mark
18(b)	**One** mark for identification of each weakness (maximum **two** marks). **One** mark for justification, which must be linked to each weakness identified (maximum **two** marks). For example: Weakness one • Sperry (1968) reports on split brain patients from the USA who may not represent all split brain patients and so what happened with them might not happen with Hina at the magic show (1) because they might have had different outcomes from split brain surgery to Hina who is from Japan and so the results from Sperry regarding naming the objects might not apply to Hina (1). Weakness two • Sperry (1968) conducted his research in a carefully controlled laboratory situation whereas Hina is on a stage in a magic show so the situation is more like real life (1) which means that Hina's outcome may differ from the split brain patients in Sperry (1968) as she may be very nervous in front of an audience and name a random object rather than saying she did not know (1). Accept any other appropriate response.	**(4)**

Type MS · Sperry (1968): split-brain patients

Answer 1 of 7 · Question 18 part a · 2 marks

2022 JUN · Paper 01 · extract 2 of 2 · find part a in this mark scheme extract

Type MS · Sperry (1968): split-brain patients

Answer 2 of 7 · Question 16 part a · 1 mark

2021 NOV · Paper 01 · extract 1 of 2 · find part a in this mark scheme extract

Question number	Answer	Mark
16(a)	**One** mark for accurate statement. For example: • 11 patients (1). Reject other answers.	(1)

Question number	Answer	Mark
16(b)	Up to **two** marks for description. For example: • He found that if patients used their right hand they could name the object correctly with ease (1). When using their left hand they were unable to name the object but were able to retrieve it from the bag correctly (1). Accept any other appropriate response.	(1)

Question number	Answer	Mark
16(c)	**B** – language processing The only correct answer is B. A is incorrect because this is not an appropriate conclusion for the research. C is incorrect because this is not an appropriate conclusion for the research. D is incorrect because this is not an appropriate conclusion for the research.	(1)

Type MS · Sperry (1968): split-brain patients

Answer 6 of 7 · Question 18 part whole · 2 marks

2023 JUN · Paper 01 · extract 1 of 2 · find part whole in this mark scheme extract

Question number	Answer	Mark
18	**One** mark for accurate understanding of Sperry (1968). **One** mark for exemplification of how Sperry (1968) can be used to explain the scenario. For example: • Sperry (1968) presented a picture of a nude to the right hemisphere of split brain patients who giggled or blushed but could not report seeing anything (1), so Amy is likely to find that her patients laugh in response to seeing the dogs doing silly things in the video but will not report seeing the video (1). Accept any other appropriate response.	**(2)**

2023 JUN · Paper 01 · extract 2 of 2 · find part whole in this mark scheme extract

Section E
Social influence – How do others affect you?

Type MS · Sperry (1968): split-brain patients

Answer 7 of 7 · Question 15 part a · 2 marks

2025 JUN · Paper 01 · extract 1 of 2 · find part a in this mark scheme extract

Question number	Answer	Mark
15(a)	**One** mark for accurate statement of each conclusion (maximum **two** marks). For example: • The left hemisphere was the primary hemisphere for language processing (1). • The right hemisphere was better than the left hemisphere at spatial skills (1). • The right hemisphere was able to process emotional reactions (1). Accept any other appropriate response.	**(2)**

Question number	Answer	Mark
15(b)	**One** mark for identification of a relevant improvement. **One** mark for justification, which must be linked to the improvement identified. For example: • Sperry could have used participants from a wider variety of cultures across the world, such as Eastern cultures like Japan as well as Western participants (1) because this would enable conclusions about the specialisation of the hemispheres to be more representative of people across the world, increasing the generalisability of his study (1). • Sperry could have compared his findings from the split brain patients with epilepsy to patients with epilepsy without the surgery (1). This would have enabled him to attribute any differences found to the operation, rather than other effects of epilepsy or medication, increasing the validity of the findings (1). Accept any other appropriate response.	**(2)**
