Answer 1 of 4 · Question 5 part whole · 12 marks

2023 JUN · Paper 02 · extract 1 of 3 · find part whole in this mark scheme extract

Question number	Indicative content	Mark
5	AO1 = 4 marks; AO2 = 4 marks; AO3 = 4 marks Markers must apply the descriptors in line with the general marking guidance (on pages 2–3). Due to the intrinsic links between the skills, if a response evidences performance against only one trait/skill it will be for demonstrating knowledge and understanding. An answer displaying qualities of AO1 only, cannot be awarded more than the top of Level 1, no matter how strong the performance is in AO1. AO1 • Field experiments take place in a realistic environment that participants would be familiar with. • Researchers will manipulate the independent variable (IV) and conditions that the participants experience. • There is a dependent variable that is measured by the researcher to test the impact of the IV. • The researchers are not always able to control extraneous variables, such as situational variables. AO2 • Scuba divers would be familiar with being underwater from their experiences as divers. • The independent variable was the manipulation of the environment of underwater or dry land when recalling words. • The number of words recalled by the scuba divers was measured by Godden and Baddeley (1975). • Distractions underwater or on land could not be controlled in the field experiment to prevent them impacting on memory. AO3 • There is higher ecological validity in the findings of a field experiment as the environment is not artificial to the participants so reflects more realistic use of memory. • By manipulating the IV, field experiments enable researchers to test specific variables, to establish cause and effect conclusions about recall. • Learning and recalling word lists would not be a normal task for scuba divers which reduces the validity of the findings about memory recall as the task is artificial. • Extraneous variables can reduce the accuracy of the results as there may be influences other than the IV of the environmental context on the number of words recalled.	**(12)**

Answer 1 of 4 · Question 5 part whole · 12 marks

2023 JUN · Paper 02 · extract 2 of 3 · find part whole in this mark scheme extract

Level	Mark	Descriptor
	0	No rewardable material.
Level 1	1–3	• Demonstrates limited knowledge and understanding of psychological processes and procedures, may not always be relevant (AO1). • Little or no application of psychological processes and procedures to the context (AO2). • Limited attempt to evaluate psychological processes and procedures. Little or no connections between the elements in the question, with unsupported, generic judgements. Limited conclusion that is not fully justified (AO3).
Level 2	4–6	• Demonstrates mostly accurate knowledge and understanding of relevant psychological processes and procedures (AO1). • Some application of psychological processes and procedures to the context but may be limited or lack relevance (AO2). • Some attempt to evaluate psychological processes and procedures but may draw on limited evidence. Mostly logical chains of reasoning, leading to judgements. Basic conclusion reached but may be superficial (AO3).
Level 3	7–9	• Demonstrates accurate and thorough knowledge and understanding of relevant psychological processes and procedures (AO1). • Relevant and accurate application of psychological processes and procedures to the context (AO2). • Sustained and accurate evaluation of psychological processes and procedures, supported with accurate evidence. Sustained and logical chains of reasoning, leading to relevant judgements with justified conclusion (AO3).
Level 4	10–12	• Demonstrates comprehensive and accurate knowledge and understanding of relevant psychological processes and procedures throughout (AO1). • Sustained relevant and accurate application of psychological processes and procedures to the context (AO2). • Comprehensive evaluation of psychological processes and procedures supported with accurate and thorough use of evidence. Sustained and logical chains of reasoning, leading to fully supported judgements with well-justified conclusion (AO3).

2023 JUN · Paper 02 · extract 3 of 3 · find part whole in this mark scheme extract

Section B
Criminal psychology – Why do people become criminals?

Type MS · Experiments: lab, field and natural

Answer 2 of 4 · Question 3 part a · 1 mark

2020 NOV · Paper 02 · extract 1 of 3 · find part a in this mark scheme extract

Question number	Answer	Mark
3(a)	**One** mark for correct knowledge of a feature of a laboratory experiment For example: • A laboratory experiment takes place in an artificial environment for the participants (1). Accept any other appropriate response.	(1)

Question number	Answer	Mark
3(b)	**One** mark for knowledge of sampling method **One** mark for application to the scenario For example: • A volunteer sample is where people offer to take part in a piece of research (1), so Becca could advertise her experiment and ask for males and females to sign up to take part (1). Accept any other appropriate response	(2)

Type MS · Experiments: lab, field and natural

Answer 2 of 4 · Question 3 part a · 1 mark

2020 NOV · Paper 02 · extract 2 of 3 · find part a in this mark scheme extract

Question number	Answer	Mark
3(c)	**One** mark for knowledge of single-blind technique. **One** mark for application to the scenario. • A single-blind technique hides the true aim of the study from the participants taking part (1) so that the males do not change their behaviour and try harder on the coordination task (1). Accept any other appropriate response.	(2)

Question number	Answer	Mark
3(d)	**One** mark for correct answer. Calculation: 30:25 simplified using common factor 30/5:25/5 • 6:5 Reject all other answers.	(1)

Question number	Answer	Mark
3(e)	**One** mark for calculating the difference. **One** mark for answer to two significant figures. • 63.51-57.24=6.27 (1) • 6.3 (1) Accept any other appropriate response.	(2)

Question number	Answer	Mark
3(f)	**One** mark for conclusion made. **One** mark for justification of conclusion through analysis of data. • Females are better at word-meaning tasks than males (1) as the female participants were 12.15 seconds quicker than the male participants at this task (1). Accept any other appropriate response.	(2)

Answer 3 of 4 · Question 1 part a · 1 mark

2021 NOV · Paper 02 · find part a in this mark scheme extract

Question number	Answer	Mark
1(a)	B – laboratory experiment **The only correct answer is B** A is incorrect as no questionnaire was used C is incorrect as the experiment was not natural D is incorrect as he did not interview the patient	(1)

Question number	Answer	Mark
1(b)	**One** mark for correct knowledge of confidentiality **One** mark for application to the scenario For example: • Confidentiality makes sure the participant cannot be identified (1), so James could give the patient a pseudonym to protect their identity in his investigation (1). Accept any other appropriate response	(2)

Answer 4 of 4 · Question 5 part whole · 12 marks

2022 JUN · Paper 02 · extract 1 of 3 · find part whole in this mark scheme extract

Question number	Indicative content	Mark
5	AO1 = 4 marks; AO2 = 4 marks; AO3 = 4 marks Markers must apply the descriptors in line with the general marking guidance (on pages 2–3). Due to the intrinsic links between the skills, if a response evidences performance against only one trait/skill it will be for demonstrating knowledge and understanding. An answer displaying qualities of AO1 only, cannot be awarded more than the top of Level 1, no matter how strong the performance is in AO1. AO1 • Natural experiments have a naturally occurring independent variable which is not manipulated by a researcher. • There is a dependent variable that is measured by the researcher to test the impact of the IV. • They take place in the real-life natural environments of the participants. • The researchers are unable to control for any extraneous variables that could affect the data they gather. AO2 • Becker et al. (2002) tested the naturally occurring introduction of television in Fiji as the independent variable. • They could measure the impact of television on eating behaviours in 1998 against no television exposure in 1995. • There was no manipulation of the length of time that the girls were exposed to television for. • The girls in Becker et al. (2002) could have also had more access to other forms of media which have been an extraneous variable of the study. AO3 • A naturally occurring IV can enable researchers to test variables that are sensitive and would otherwise be unethical to create artificially. • Becker et al. (2002) used standardised and objective measures such as the EAT-26 and BMI to help make sure their measure was comparable between the two samples. • There is high ecological validity in the findings of a natural experiment as the context and conditions of the IV are not artificially imposed by researchers. • Extraneous variables can confound the results of natural experiments, influencing the results and reducing the accuracy of the findings about the impact of television.
