Type MS · Piliavin et al. (1969): helping on the New York subway

Answer 1 of 7 · Question 25 part whole · 2 marks

2024 JUN · Paper 01 · extract 1 of 2 · find part whole in this mark scheme extract

Question number	Answer	Mark
25	**One** mark for accurate understanding of Piliavin et al. (1969). **One** mark for exemplification of how of Piliavin et al. (1969) can be used to explain the scenario. For example: • Piliavin showed that females were less likely to help than males, with 90% of the spontaneous helpers (within 70 seconds) being male (1), so the female participant is less likely to raise the alarm about the theft of the purse than the male participant (1). Accept any other appropriate response.	**(2)**

Type MS · Piliavin et al. (1969): helping on the New York subway

Answer 1 of 7 · Question 25 part whole · 2 marks

Section F

Type MS · Piliavin et al. (1969): helping on the New York subway

Answer 2 of 7 · Question 21 part a · 2 marks

2019 JUN · Paper 01 · extract 1 of 2 · find part a in this mark scheme extract

Question number	Answer	Mark
21(a)	**One** mark for demonstrating accurate understanding of Piliavin et al. (1969). **One** mark for exemplification of how Piliavin et al. (1969) can be used to explain the scenario. For example: • Piliavin et al. (1969) found that the drunk victims were helped spontaneously in 19/38 (50%) of trials (1) which suggests that Tunji will have about 1 in 2 chance of being helped spontaneously by strangers on the train (1). Accept any other appropriate response.	**(2)**

Question number	Answer	Mark
21(b)	**One** mark for identification of the strength / weakness (maximum **two** marks). **One** mark for justification, which must be linked to the strength / weakness identified (maximum **two** marks). For example: Strength • Piliavin et al. (1969) was conducted on a real New York subway train so the study had ecological validity (1) which means that the participants are likely to have acted naturally and can therefore be comparable to Tunji's situation as she is on a public train (1). Weakness • Piliavin et al. (1969) was conducted in a natural setting of a subway train and so there are uncontrolled variables that could have influenced the results (1) so there could be things in Tunji's setting that are not the same as in the study so the findings may not be applicable to explain if people will help her (1). Accept any other appropriate response.	**(4)**

2019 JUN · Paper 01 · extract 2 of 2 · find part b in this mark scheme extract

Type MS · Piliavin et al. (1969): helping on the New York subway

Answer 4 of 7 · Question 24 part b · 2 marks

2021 NOV · Paper 01 · extract 1 of 3 · find part b in this mark scheme extract

Question number	Answer	Mark
24(a)	**One** mark for demonstrating accurate understanding of pro-social behaviour. **One** mark for exemplification of how pro-social behaviour can be used to explain the scenario. For example: • Pro-social behaviour is acting in a desirable way in society by being kind and caring to others and helping when they might be hurt (1). Kyle could have helped as he may have been trained in helping with injuries through a first aid course at work so felt more capable to act pro-socially and help the drunk man (1). Accept any other appropriate response.	**(2)**

Type MS · Piliavin et al. (1969): helping on the New York subway

Answer 4 of 7 · Question 24 part b · 2 marks

2021 NOV · Paper 01 · extract 2 of 3 · find part b in this mark scheme extract

Question number	Answer	Mark
24(b)	**One** mark for demonstrating accurate understanding of Piliavin et al. (1969). **One** mark for exemplification of how Piliavin et al. (1969) can be used to explain the scenario. For example: • Piliavin et al. (1969) found women are less likely to help a male victim than men with 90% of the spontaneous helpers being male (1) so as Joanne is female she may have chosen not to help because the cost to her is potentially higher than for Kyle who is male and she may feel threatened by the drunk man (1). Accept any other appropriate response.	**(2)**

Question number	Answer	Mark
24(c)	**One** mark for each conclusion made. (maximum **two** marks). **One** mark for justification of conclusion through analysis/interpretation. (maximum **two** marks). For example: • Females were unwilling to help the drunk man (1) which is shown by a total of five females who did not help compared to four males who did help (1). • Help was either given quickly or not at all (1) because four people helped within 30 seconds, but nobody helped within 30-60 seconds and they just chose not to instead (1). Accept any other appropriate response.	**(4)**
