Practice workbook · Haber and Levin (2001): judging size and distance

The study of size and distance judgement for familiar, token-variant and unfamiliar objects.

5 question parts: 1 worked-example retry and 4 further practice parts.
Name: _____ Class: _____ Date: _____

Practise one question type at a time. Attempt the part inside the red boundary; the rest of the question and any figures are kept for context. Write your working in the answer space.

The first question is a retry of the website worked example, without its solution. Check your answers online with 'Check my answer', or ask your teacher for the answer booklet.

1. Question 25 · part whole · 2 marks

2024 JUN · Paper 02

Worked-example retry · Attempt part whole only.

25 Colin was shopping for new curtains for his living room window. He found some curtains that he liked, but there were lots of different sizes to select from.

Colin estimated how big the window was and bought curtains he believed would fit. When he returned home, the window was larger than he thought, so the curtains were too small.

Explain **one** reason why Colin found it difficult to estimate the correct size of the window.

You must use Haber and Levin (2001) to justify your answer.

2. Question 28 · part whole · 9 marks

2019 JUN · Paper 02

Further practice · Attempt part whole only.

***28** Zara was a participant in a study to see whether she could accurately make judgements about the size and distance of objects. She was shown 30 objects of varying sizes placed at different distances from her.

The researchers selected 20 objects they considered to be familiar, for example a coffee machine, and 10 objects they considered to be unfamiliar, for example a scaled down model of a castle.

Zara was not able to accurately judge the size of half of the objects. She was accurate in determining the distance of most of the familiar objects.

Assess how well the findings from Haber and Levin (2001) can explain Zara's inaccuracy of size and distance judgement.

5. Question 25 · part whole · 4 marks

2023 JUN · Paper 02

Further practice · Attempt part whole only.

25 Killian was visiting a big city and could see his hotel in the distance. Killian thought the hotel was about 75 metres tall because the cars parked outside the hotel were about 1.5 metres tall, and the hotel looked about 50 times bigger.

When he arrived, he asked the receptionist how tall the hotel was. She said it was 50 metres tall.

Explain **one** strength and **one** weakness of using Haber and Levin (2001) to explain Killian's perception of the hotel.
