Type MS · Carmichael, Hogan and Walter (1932): words change what we see

Answer 1 of 6 · Question 26 part whole · 9 marks

2025 JUN · Paper 02 · extract 1 of 3 · find part whole in this mark scheme extract

Question number	Indicative content	Mark
26	AO1 = 3 marks; AO2 = 3 marks; AO3 = 3 marks Markers must apply the descriptors in line with the general marking guidance (on pages 2–3). Due to the intrinsic links between the skills, if a response evidences performance against only one trait/skill it will be for demonstrating knowledge and understanding. An answer displaying qualities of AO1 only, cannot be awarded more than the top of Level 1, no matter how strong the performance is in AO1. **AO1** • Carmichael, Hogan, and Walter (1932) presented ambiguous images to participants, with a word or phrase heard just before the image appeared. • Results showed that 74% of the pictures drew in list 1, and 73% of the pictures drew in list 2 resembled the shape of the object that participants were told the image looked like but for the control group only 45% of the pictures resembled either of the names in list 1 or 2. • Carmichael, Hogan, and Walter (1932) concluded that the use of words and phrases prior to the observation of an image affects the way that the image was perceived. **AO2** • Jessie's study replicated Carmichael, Hogan, and Walter's (1932) procedure, showing a number of ambiguous images to participants, with words or descriptions heard prior to the image being shown to one of the groups. • Jessie's results showed that group 1 drawings were more similar to the words given prior to the image shown, whilst group 2 drawings were more like the original, similar to Carmichael, Hogan, and Walter (1932). • Participants who were given the description of `ice cream cone` perceived the image of the upside-down triangle differently to the group who had no descriptions. **AO3** • Both studies were conducted in controlled conditions using a similar artificial task and a control group, suggesting that the conclusions of Carmichael, Hogan, and Walter (1932) study can be reliably applied to Jessie's results. • There were some differences in the way Jessie conducted her study compared with Carmichael, Hogan, and Walter (1932) such as fewer participants, and fewer images that were presented in a different way, so their findings may not totally explain the differences in drawings. • Jessie only used males whereas Carmichael, Hogan, and Walter (1932)	**(9)**

2025 JUN · Paper 02 · extract 2 of 3 · find part whole in this mark scheme extract

	used both males and females, so Jessie's conclusions may have been different if he had used females as they may perceive images differently.	

Level	Mark	Descriptor
	0	No rewardable material.
Level 1	1–3	• Demonstrates isolated elements of knowledge and understanding of a limited range of psychological ideas (AO1). • Provides little or no reference to relevant psychological ideas related to the context (AO2). • Limited attempt to deconstruct relevant psychological ideas. Limited consideration of supporting/refuting evidence, leading to generic judgements (AO3).
Level 2	4–6	• Demonstrates mostly accurate understanding of some relevant psychological ideas (AO1). • Provides some reference to relevant psychological ideas related to the context but this may be limited or lack relevance at times (AO2). • Deconstructs relevant psychological ideas using mostly logical chains of reasoning. Some consideration of supporting/refuting evidence, leading to a judgement (AO3).
Level 3	7–9	• Demonstrates accurate and thorough knowledge and understanding of relevant psychological ideas (AO1). • Provides sustained reference to relevant psychological ideas related to the context (AO2). • Deconstructs relevant psychological ideas using logical chains of reasoning. Sustained consideration of supporting/refuting evidence, showing an awareness of competing arguments, leading to a judgement (AO3).

Sleep and dreaming – Why do you need to sleep and dream?

Type MS · Carmichael, Hogan and Walter (1932): words change what we see

Answer 2 of 6 · Question 27 part whole · 4 marks

2019 JUN · Paper 02 · extract 1 of 2 · find part whole in this mark scheme extract

Question number	Answer	Mark
27	**One** mark for identification of each way (maximum **two** marks). **One** mark for reasoning/justification of each way through reference to the study (maximum **two** marks). For example: • Kia would need to select 12 ambiguous modern-day images and two names for each image to use in her study (1) which replicates the 12 images used in Carmichael et al (1932) but makes it more relevant to 2019 (1). • Kia could sample participants from the local community with different educational backgrounds (1) so her sample will not just be college students and teachers, so will be more representative of the general public (1). Accept any other appropriate response.	**(4)**

Answer 3 of 6 · Question 25 part whole · 4 marks

2020 NOV · Paper 02 · extract 1 of 2 · find part whole in this mark scheme extract

Question number	Answer	Mark
25	**One** mark for identification of each reason (maximum **two** marks). **One** mark for reasoning/justification of each reason through reference to the study (maximum **two** marks). For example: • Zak would not correctly identify the original shapes because the name given when he saw them will distort his perception of the shape (1) as Carmichael et al. (1932) found that words given when perceiving a visual form can determine how it is reproduced, making Zak less able to distinguish between the paired shapes (1). • Zak may not correctly identify all shapes if the name for the shape was not something Zak was otherwise familiar with (1). In Carmichael et al. (1932) they found around 25% of figures reproduced did not resemble the name, so Zak may also have a 25% inaccuracy (1). Accept any other appropriate response.	**(4)**

Type MS · Carmichael, Hogan and Walter (1932): words change what we see

Answer 4 of 6 · Question 27 part whole · 4 marks

2021 NOV · Paper 02 · extract 1 of 2 · find part whole in this mark scheme extract

Question number	Answer	Mark
27	**One** mark for identification of each way (maximum **two** marks). **One** mark for justification which must be linked to the way identified (maximum **two** marks). For example: • Alena may have interpreted the pond drawn on the map as a roundabout because she has seen a similar drawing where it was named as a roundabout (1). Carmichael et al. (1932) found that when perceiving a visual form the words given at the time can determine how it is perceived, which could explain why Alena misunderstood the map (1). • Rose has drawn the map with her own reproduction of images, so her drawing of the pond may not accurately resemble a pond to Alena (1), because 26-27% of figures reproduced by participants in Carmichael et al. (1932) did not resemble the name of the object they were given, so the drawing may be misleading (1). Accept any other appropriate response.	**(4)**

Type MS · Carmichael, Hogan and Walter (1932): words change what we see

Answer 5 of 6 · Question 26 part whole · 9 marks

2022 JUN · Paper 02 · extract 1 of 3 · find part whole in this mark scheme extract

Question number	Indicative content	Mark
26	AO1 = 3 marks; AO2 = 3 marks; AO3 = 3 marks Markers must apply the descriptors in line with the general marking guidance (on pages 2–3). Due to the intrinsic links between the skills, if a response evidences performance against only one trait/skill it will be for demonstrating knowledge and understanding. An answer displaying qualities of AO1 only, cannot be awarded more than the top of Level 1, no matter how strong the performance is in AO1. AO1 • Carmichael, Hogan and Walter (1932) presented images with a verbal prompt of 'the next figure resembles…' and then a name for the image was given. • Results showed that in the images drawn by participants, 74% of list I and 73% of list II were more like the name that was given at presentation than the image seen. • They concluded that the word presented when someone first visually perceives a figure can determine the image that is reproduced. AO2 • When Steven and Thomas heard the words and saw the image of the ambiguous figures, they were in a controlled and artificial experimental context. • Steven and Thomas were presented with words for the image at the same time as each image was shown to them, rather than before seeing the image. • The drawings may differ from the ambiguous figure shown because Steven may have drawn a ruler, while Thomas's may have drawn a comb instead of the actual image given. AO3 • The artificial context of the study may not represent how Steven and Thomas would reproduce ambiguous figures in a natural environment or real-life situation. • The procedure was not precisely replicated, so the findings from Carmichael, Hogan and Walter (1932) may not fully explain differences in the drawings by Steven and Thomas. • Differences in Steven and Thomas's drawings are similar to the results from Carmichael, Hogan and Walter (1932) that over 70% of the redrawn images looked more like the word than the figure.	**(9)**

Answer 6 of 6 · Question 26 part whole · 4 marks

2024 JUN · Paper 02 · extract 1 of 2 · find part whole in this mark scheme extract

Question number	Answer	Mark
26	**One** mark for identification of each way (maximum **two** marks). **One** mark for justification which must be linked to the way identified (maximum **two** marks). For example: • The nature reserve warden had named the boats as canoes which may have changed Helga's perception and caused her to reproduce the named 'canoe' rather than boats (1), as 73% to 74% of reproductions in the study showed more resemblance to the named image rather than the actual image presented to them (1). • Lena's map included the boats on the lake as there had been no other verbal naming of these map locations that would change her drawing (1). Only 45% of the control group reproduced images that resembled either list of names, suggesting that without verbal naming, people are more accurate in their drawn reproductions (1). Accept any other appropriate response.	**(4)**
