Practice workbook · Genes and depression: Caspi et al. (2003)

The genetic explanation of depression and addiction, and Caspi et al. (2003) on 5-HTT genotype interacting with life stress.

8 question parts: 1 worked-example retry and 7 further practice parts.
Name: _____ Class: _____ Date: _____

Practise one question type at a time. Attempt the part inside the red boundary; the rest of the question and any figures are kept for context. Write your working in the answer space.

The first question is a retry of the website worked example, without its solution. Check your answers online with 'Check my answer', or ask your teacher for the answer booklet.

1. Question 15 · part whole · 2 marks

2022 JUN · Paper 01

Worked-example retry · Attempt part whole only.

15 Bob has two children. One of his children has been diagnosed with cancer twice but recovered both times. His father, who suffered from depression, has recently died and Bob also lost his job in the recruitment industry.

Explain how likely Bob is to develop depression.

You should refer to Caspi et al. (2003) in your answer.

(Total for Question 15 = 2 marks)

11 Rachel is experiencing constant low moods and does not feel motivated to go to school or out with her friends anymore. She used to perform in triathlons but had a serious injury and now has stopped exercising altogether.

Rachel received some abusive messages on social media recently regarding her gaining weight, which has led to her becoming even more isolated.

Rachel has been diagnosed with depression.

(a) Explain how genes could have contributed to Rachel's diagnosis of depression. You should refer to a study in your answer.

(2)

(b) Explain **one** weakness of the influence of genes as an explanation of Rachel's depression.
