Type MS · Measuring personality: traits, scales and the 16PF

Answer 1 of 8 · Question 18 part whole · 2 marks

2024 JUN · Paper 02 · extract 1 of 2 · find part whole in this mark scheme extract

Question number	Answer	Mark
18	**One** mark for identification of a reason. **One** mark for reasoning/justification through a theory. For example: • Patrick may have given socially desirable answers to achieve the personality trait scores he believed fit with his social values of being relaxed, tough and caring (1). Cattell's (1946) 16PF personality factor assessment would be measured using self-report data which then gives results of the 16PF's on a scale, such as caring to impersonal on the warmth scale, which Patrick may have given false answers to, so he achieved the outcome he wanted (1). Accept any other appropriate response.	**(2)**

Type MS · Measuring personality: traits, scales and the 16PF

Answer 2 of 8 · Question 17 part whole · 2 marks

2019 JUN · Paper 02 · find part whole in this mark scheme extract

Question number	Answer	Mark
17	**One** mark for knowledge of how to measure personality. **One** mark for understanding a way to use measure for personality. For example: • Personality can be measured using self-report questionnaires that test personality (1) such as Catell's (1946) 16PF which is a way to assess an individual's personality factors (1). Accept any other appropriate response.	**(2)**

Type MS · Measuring personality: traits, scales and the 16PF

2020 NOV · Paper 02 · extract 1 of 2 · find part whole in this mark scheme extract

Question number	Answer	Mark
18	**One** mark for identification of each way (maximum **two** marks). **One** mark for reasoning/justification of each way identified which must be linked to theory (maximum **two** marks). For example: • Jim takes time to research all his topics and information and be precise and organised which he may not have been able to do in two days (1). Organisation would be a central personality trait that shapes Jim's behaviour making him nervous if he feels unprepared (1). • Jim may feel nervous speaking in front of his class and teacher because of a secondary personality trait such as shyness (1) which Allport (1936) claims is dependent on the context so explains why Jim is not usually a nervous person in lessons (1). Accept any other appropriate response.	**(4)**

Answer 4 of 8 · Question 21 part whole · 9 marks

2021 NOV · Paper 02 · extract 1 of 3 · find part whole in this mark scheme extract

Question number	Indicative content	Mark
21	AO1 = 3 marks; AO2 = 3 marks; AO3 = 3 marks Markers must apply the descriptors in line with the general marking guidance (on pages 2–3). Due to the intrinsic links between the skills, if a response evidences performance against only one trait/skill it will be for demonstrating knowledge and understanding. An answer displaying qualities of AO1 only, cannot be awarded more than the top of Level 1, no matter how strong the performance is in AO1. AO1 • Cardinal traits are rare, but when present they can shape the personality of an individual quite strongly. • Central traits consist of a range of characteristics that can be present in varying degrees in an individual. • Secondary traits are situational personality characteristics that are evident depending on the context of the behaviour. AO2 • Bradley's kindness could be a cardinal trait as it is how he is known by his friends and dominates his life style through the charity work he does. • Honesty may be a central trait that Bradley has which is a characteristic that the charity recognises in him but it may not be as dominating in his personality. • A secondary trait would be nervousness because even though Bradley is brave enough to travel to places of conflict the situation of public speaking makes him nervous. AO3 • Questionnaires can be used to objectively measure the extent to which traits are present in individuals providing quantitative measures of Bradley's personality traits. • Allport's (1936) trait theory does not fully account for the role of nurture and socialisation which could explain Bradley's kindness as he may have been brought up to behave this way. • Cattell (1946) reduced Allport's 4000 traits into 16 in his 16-point personality factor assessment, so traits like nervousness or bravery may be simpler to explain using Cattell.	**(9)**

Answer 4 of 8 · Question 21 part whole · 9 marks

2021 NOV · Paper 02 · extract 2 of 3 · find part whole in this mark scheme extract

Level	Mark	Descriptor
	0	No rewardable material.
Level 1	1–3	• Demonstrates isolated elements of knowledge and understanding of a limited range of psychological ideas (AO1). • Provides little or no reference to relevant psychological ideas related to the context (AO2). • Limited attempt to deconstruct relevant psychological ideas. Limited consideration of supporting/refuting evidence, leading to generic judgements (AO3).
Level 2	4–6	• Demonstrates mostly accurate understanding of some relevant psychological ideas (AO1). • Provides some reference to relevant psychological ideas related to the context but this may be limited or lack relevance at times (AO2). • Deconstructs relevant psychological ideas using mostly logical chains of reasoning. Some consideration of supporting/refuting evidence, leading to a judgement (AO3).
Level 3	7–9	• Demonstrates accurate and thorough knowledge and understanding of relevant psychological ideas (AO1). • Provides sustained reference to relevant psychological ideas related to the context (AO2). • Deconstructs relevant psychological ideas using logical chains of reasoning. Sustained consideration of supporting/refuting evidence, showing an awareness of competing arguments, leading to a judgement (AO3).

Perception – How do you interpret the world around you?

Type MS · Measuring personality: traits, scales and the 16PF

Answer 5 of 8 · Question 16 part whole · 2 marks

2022 JUN · Paper 02 · find part whole in this mark scheme extract

Question number	Answer	Mark
16	**One** mark for accurate understanding of personality scales. **One** mark for exemplification of how personality scales can be used to explain the scenario. For example: • A personality scale is a scoring system that measures the different traits that are part of someone's personality (1) so Karen could complete a questionnaire to test how highly she scores in perfectionism which is associated with being in control (1). Accept any other appropriate response.	**(2)**

Answer 6 of 8 · Question 18 part whole · 4 marks

2022 JUN · Paper 02 · extract 1 of 2 · find part whole in this mark scheme extract

Question number	Answer	Mark
18	**One** mark for identification of strength/weakness (maximum **two** marks). **One** mark for justification, which must be linked to the strength/weakness identified (maximum **two** marks). For example: Strength • The result that George is caring and trusting should be accurate as he used a well-established 16PF personality assessment questionnaire to assess personality traits (1) so the questionnaire has been used to test personality traits consistently over time giving high internal validity and making it more likely that George is caring and trusting (1). Weakness • George may have given socially desirable responses to achieve personality trait scores that he believes fit with his social values of being trusting, relaxed or caring (1) meaning the results may reflect a bias towards how George wishes to be seen by others and not an accurate measure of his real personality traits (1). Accept any other appropriate response.	**(4)**
